~~Amazon.com: Customer reviews: Jamestown's Number Power ...~~

These numbers may look easy to calculate, some numbers really are. Like the square of 15 (225), or square of 25 (625), or cube of 4 (64), or  $3^4$  ( $3 \times 3 \times 3 \times 3 = 81$ ).. But as the numbers go higher and the exponential power increases, finding the right answer starts becoming more and more difficult.

## Power & Sample Size Calculator

Use this advanced sample size calculator to calculate the sample size required for a one-sample statistic, or for differences between two proportions or means (two independent samples). More than two groups supported for binomial data. Calculate power given sample size, alpha, and the minimum detectable effect (MDE, minimum effect of interest).
