In Anavatan, the city of the Silver Lake, the gods manifest on a regular basis. But if you are among the unpledged, it is hard to survive, especially during the three-night-long chaos known as Havo's Dance. When Havo's storms sweep through Anavatan, anyone who is unaffiliated had best find a safe place to hide or they risk madness or death. But this year, three young street orphans have been chosen for special attention by Incasa, the god of prophecy. When that God's dice roll during the height of Havo's Dance, these three boys-thieves and con artists-will discover their destinies. One will be bound by a life-or-death pledge that will see him marked as the future Champion of the War God, another forced to walk a perilous road as he seeks to master his talent as a seer, and the last will be cast forth from the city and claimed by the hungry spirits seeking a way into Anavatan and the precious power contained in the Silver Lake.

The gang is back in an all-new adventure! Join Hiro, Baymax, Go Go, Wasabi, Honey Lemon, and Fred as they fight to protect the streets of San Fransokyo.

The channels and mechanisms of knowledge flows define the links that make up production and innovation systems. As such, they relate directly or indirectly to all policies that affect such systems. Knowledge flows are also directly related to intellectual property protection policies and competition policies that create the infrastructure supporting various forms of formal interaction among economic agents in production and innovation systems. Knowledge Flows in European Industry presents the results of an extensive research programme funded by the European Commission to empirically appraise the dissemination of knowledge relevant to the innovative activities of European manufacturing and service sectors. It explores the extent, density, and mechanism of innovation-related knowledge flows affecting the innovative capacity of European industry and the mechanisms that support such flows, as well as examining incentives to access and transmit results and the determinants of knowledge transmission. Featuring contributions from leading international scholars including Anthony Arundel and Bent Dalum, this interdisciplinary volume focuses on questions of interest to regional, national, and pan-European science, technology and innovation policy, and will be an important read for those involved in business and management as well as those in the field of economics.

Thoroughly updated for its third edition with the latest research in the field, this innovative text delivers an apt and comprehensive introduction to the rich and complex world of animal behaviour and cognition. Discover pivotal case studies and experiments that have irrevocably shaped how we view the psychological and social lives of animals and discover such key cognitive topics as memory, communication and sensory perception. Projecting an insightful scope into the cognitive world of animals, from considering the use of tools in birds to the dance communication system of the honey bee, Wynne and Udell analyse and explain the importance of the observations and studies that have led to the greater understanding of how animals learn, perceive social relations, form concepts, experience time and navigate space. Written by two leading researchers in the field, including the author of the best-selling popular science book Dog is Love, this textbook is a complete resource for students of animal cognition, animal behaviour or comparative psychology.
