Foundations Of

In mathematics,  
Mathematics  
a variable may  
be continuous or  
discrete. If it  
can take on two  
particular real  
values such that  
it can also take  
on all real  
values between  
them (even

values that are arbitrarily close together), the variable is continuous in that interval. If it can take on a value such that there is a non-infinitesimal gap on each side of it containing no values that

the variable can take on, then it is discrete around that value. In some contexts a variable can be discrete in some ranges of  $t$
