With delicate language and wisdom, Madeleine Thien explores the longing of families pulled apart by conflicts between generations, cultures, and values. Each of these stories captures a deeply personal world in which characters struggle to reconcile family loyalty with individual desires. In "House," a 10-year-old girl longs for the alcoholic mother who left the house one day never to return. In "Dispatch," a woman tries to hold her marriage together even after finding proof that her husband is in love with someone else. In "A Map of the City," a young woman's troubled relationship with her father overshadows the course she takes in her adult life. Thien's fresh perspective and spare, haunting prose have already won her prizes and the praise of established masters. "Simple Recipes" is the beginning of a luminous writing career.

This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

Understanding fuel injection and engine management systems is the key to extracting higher performance from today's automobiles in a safe, reliable, and driveable fashion. Turbochargers, superchargers, nitrous oxide, high compression ratios, radical camshafts: all are known to make horsepower, but without proper understanding and control of fuel injection and other electronic engine management systems, these popular power-adders will never live up to their potential and, at worst, can cause expensive engine damage. Drawing on a wealth of knowledge and experience and a background of more than 1,000 magazine articles on the subject, engine-control expert Jeff Hartman explains everything from the basics of fuel injection to the building of complex project cars. Hartman covers the latest developments in fuel-injection and engine management technology applied by both foreign and domestic manufacturers, including popular aftermarket systems. No other book in the market covers the subject of engine management systems from as many angles and as comprehensively as this book. Through his continuous magazine writing, author Jeff Hartman is always up-to-date with the newest fuel-injection and engine management products and systems.

Case studies include lethal and nonlethal missions performed by soldiers in Iraq and Afghanistan. The events chronicled span the spectrum of participants from officers to noncommissioned officers, and from combat units to support personnel, all in contact with a vicious and unforgiving enemy.
