Leading Marines, first published in 1995 and updated in 2014, is the US Marines' main publication describing its leadership philosophy.

This is General Friedrich Wilhelm von Steuben's book -- this copy published in 1779 -- which explains and details his philosophy regarding troops and their regulation, a philosophy which was essential to the creation of a disciplined Continental Army during the American Revolution. This includes scans of the original plates used to help describe troop, column, and file movements in various terrain.

Warfighting should help the Marine Commander and troop prepare mentally, physically, both externally, and internally for combat action. It covers the distinct levels of war -- strategic, operational, and tactical, conduct of war, and types of warfare. Every Marine Corps officer should understand and apply the principles to understand the demands of war, theory of war, including the foundations, preparation and actively engagin within war. This guide provides authoritative guidance for the completion of this war task as a key method to instill successful outcomes and strategic battlefield dynamic development within the nature of the war environment. This book covers both classical and modern models in deep learning. The primary focus is on the theory and algorithms of deep learning. The theory and algorithms of neural networks are particularly important for understanding important concepts, so that one can understand the important design concepts of neural architectures in different applications. the-shelf machine-learning models? When is depth useful? Why is training neural networks so hard? What are the pitfalls? The book is also rich in discussing different applications in order to give the practitioner a flavor of how neural architectures are designed for different types of problems. Applications associated with many different areas like recommender systems, machine translation, image captioning, image classification, reinforcement-learning based gaming, and text analytics are covered. The chapters of this book span three categories: The basics of neural networks: Many traditional machine learning models can be understood as special cases of neural networks. An emphasis is placed in the first two chapters on understanding the relationship between traditional machine learning and neural networks. Support vector machines, linear/logistic regression, singular value decomposition, matrix factorization, and recommender systems are shown to be special cases of neural networks. These methods are studied together with recent feature engineering methods like word2vec. Fundamentals of neural networks: A detailed discussion of training and regularization is provided in Chapters 3 and 4. Chapters 5 and 6 present radial-basis function (RBF) networks and restricted Boltzmann machines. Advanced topics in neural networks: Chapters 7 and 8 discuss recurrent neural networks and convolutional neural networks. Several advanced topics like deep reinforcement learning, neural Turing machines, Kohonen self-organizing maps, and generative adversarial networks are introduced in Chapters 9 and 10. The book is written for graduate students, researchers, and practitioners. Numerous exercises are available along with a solution manual to aid in classroom teaching. Where possible, an application-centric view is highlighted in order to provide an understanding of the practical uses of each class of techniques.

"This two-volume anthology of interviews tells the story of the al-Anbar Awakening and the emergence of al-Anbar Province from the throes of insurgency. It presents the perspectives of both Iraqis (volume two) and Americans (volume one) who ultimately came to work together, in an unlikely alliance of former adversaries, for the stabilization and redevelopment of the province. The collection begins in the 2003-2004 time frame with the rise of the insurgency and concludes with observations from the vintage point of early-to-mid 2009. The anthology demonstrates that there is not one history of the Awakening, but several histories intertwined. It is not a complete collection, but one that provides a broad spectrum of candid, unvarnished perspectives from some of the leading players."--Pref.

"In [D'Amato's] able hands, Marxist politics come alive and leap before us, pointing a way toward a better world. It's a knockout."—Dave Zirin, author of *What's My Name, Fool?: Sports and Resistance in the United States* In this lively and accessible introduction to the ideas of Karl Marx, with historical and contemporary examples, D'Amato argues that Marx's ideas of globalization, oppression, and social change are more important than ever. The Corps does two things for America: they make Marines and they win the nation's battles. The ability to successfully accomplish the latter depends on how well the former is done.
