medicines management in adult nursing transforming nursing practice series Sep 16, 2020 Posted By Janet Dailey Library TEXT ID b74a8951 Online PDF Ebook Epub Library nurses each book in the series is affordable mapped to the nmc standards and essential skills clusters focused on applying theory to practice full of active learning features

Children's nurses must develop the crucial skills of correct medicines management and calculations in order to provide safe care to their patients. This book specifically supports pre-registration students in meeting the required competencies for medicines management needed to pass formal assessment and qualify as a children's nurse. It is clearly structured around the NMC Essential Skills Clusters for medicines management, covering legal aspects, drugs calculations, administration, storage, record keeping, introductory pharmacology, patient communication and contextual issues in medication. The book is written in user-friendly language and uses patient scenarios to explain concepts and apply theory to practice.

Medicines Management provides a concise exploration of the nurse's role in medicines management. It explains what is meant by medicines management, discusses the current professional and legal context, gives insight into the reasons why mistakes are made, and focuses on the principles of safe drug administration.

This title is directed primarily towards health care professionals outside of the United States. An understanding of medicines and their effects on patients remains a crucial area of nursing knowledge. This book provides a thorough foundation upon which nurses can build their clinical experience to achieve competence. It not only provides information on the actions of drugs on the body but also gives clear guidance on the practical aspects of medicines management in both hospital and community. Organisation of the text broadly follows the British National Formulary for ease of use. Management of medicines linked to their therapeutic use Medicine administration linked with relevant care of patients where possible Basic principles of clinical pharmacology underpin the therapeutic chapters A chapter on the role of patients and carers is included All content revised in the light of changes in drug therapy, clinical practice and medicines management including nurse prescribing Key objectives for each chapter Self-assessment exercises with answers More detail relating to palliative care; nurse prescribing A new section on Intensive Therapy Totally redesigned in two colours with improved design and page layout, and better illustrations

Medicines Management for Nurses at a Glance is the perfect companion for study and revision for pre-registration nursing and healthcare students. Combining superb full colour illustrations with accessible and informative text, it provides an easy-to-read and supportive guide to the key pharmacological knowledge nursing students and registered nurses need to know. Divided into three sections, the first introduces key topics within clinical pharmacology and medicines management including, numeracy, pharmacokinetics, routes of administration, and pharmacodynamics. The second and final sections cover the management of medicines for common medical conditions, drug interactions, side effects, and safe and effective prescribing. Written specifically for nurses, it covers the fundamentals of pharmacology as they apply to nursing practice. Breaks down complex concepts in an accessible way, providing helpful overviews of all key pharmacological topics. Includes practical issues relating to practice, and is written to support the Essential Skills Cluster of the NMC, and the content of the BNF. Includes content relevant to each of the four fields of nursing, and covers drugs for specific groups such as children, pregnant and breastfeeding women, and the elderly. A companion website is available at www.ataglanceseries.com/nursing/medicinesmanagement featuring interactive multiple choice questions.

Managing medicines can seem a daunting prospect for new nursing students, but is a crucial skill they must develop from day one to provide safe care to their patients. This book specifically supports first-year, pre-registration students in meeting the required competencies for medicines management needed for progression into the second year. It is structured around the NMC Essential Skills Clusters, providing a clear introduction to law, calculations, administration, introductory pharmacology, patient communication and contextual issues applied to medicines management. The book is written in user-friendly language and uses patient scenarios to explain concepts and apply theory to practice.

Correct medicines management for adults is a crucial skill that adult nursing students must develop in order to provide safe care to their patients. This book specifically supports pre-registration students in meeting the required competencies for medicines management needed to pass formal assessment and qualify as an adult nurse. It is clearly structured around the NMC Essential Skills Clusters for medicines management, covering legal aspects, drugs calculations, administration, storage, record keeping, introductory pharmacology, patient communication and contextual issues in medication. The book is written in user-friendly language and uses patient scenarios to explain concepts and apply theory to practice.
