Highlights: New Release. The 7 th edition of MS-2 Asphalt Mix Design Methods marks the 56 th year of continuous publication of an Asphalt Institute mix design manual. The manual is a practical guide based on proven technologies, incorporating the most current information available in 2014. This edition offers significantly expanded application and guidance relative to our previous mix design manuals.

Marshall Mix Design. The basic concepts of the Marshall mix design method were originally developed by Bruce Marshall of the Mississippi Highway Department around 1939 and then refined by the U.S. Army. Currently, the Marshall method is used in some capacity by about 38 states. The Marshall method seeks to select the asphalt binder content at a desired density that satisfies minimum stability and range of flow values (White, 1985 { {1}}).

Mix Design. The two key components of pavement design are mix design and structural design. This section deals with HMA and PCC mix design. The goal of mix design is to determine the optimum mixture of component materials for a given application. This includes detailed evaluations of aggregate, asphalt and portland cement as well as a determination of their optimum blending ratios.

To make ease in understanding we are finding the Concrete mix design of M20 grade concrete. The Concrete mix ratio for M20 grade of concrete is 1:1.5:3 that mean 1 part of cement, 1.5 part of sand (fine aggregate) and 3 parts of aggregate (crushed stone) in volume and then batched for mixing. To know the Concrete Mix Design follow below:-

ACI Mix Design The most common method used in North America is that established by ACI Recommended Practice 211.1 Any mix design procedure will provide a first approximation of the proportions and must be checked by trial batches. Local characteristics in materials should be considered.

So, concrete mix design can be stated as Concrete Mix = Cement:Sand:Aggregates. The concrete mix design involves various steps, calculations and laboratory testing to find right mix proportions. This process is usually adopted for structures which requires higher grades of concrete such as M25 and above and large construction projects where quantity of concrete consumption is huge..
