Head and neck cancer is a very common cancer worldwide with an estimated 500,000 individuals diagnosed each year. In the United States an average of 39,000 new cases are reported each year representing between 3 to 5% of all new cancer cases diagnosed annually. Head and neck cancers are more common in men and in individuals over the age of 50. The treatment of head and neck cancer is extremely challenging and involves insight and expertise from multiple disciplines. Multidisciplinary Management of Head and Neck Cancer is a comprehensive textbook looking at different aspects of head and neck cancer, including the diagnosis, treatment and outcomes for patients with this disease. The chapters written by world-renowned experts cover the entire discipline of head and neck oncology and include discussion of the role of HPV infections, advances in radiotherapy, new surgical techniques, novel agents in thyroid therapy and more. The book is designed to be both practical and comprehensive for the physicians treating this complex disease. Features of Multidisciplinary Management of Head and Neck Cancer include: A chapter on the role of HPV infections in head and neck cancer A chapter on new advances in radiotherapy for head and neck cancer, including review IMRT, new standards and potential pitfalls Detailed discussion of the role of chemotherapy in head and neck cancer, including commonly used drugs and how to combine them with radiotherapy to improve patient outcomes Detailed discussion on incorporating novel agents with radiotherapy Detailed discussion of novel therapeutics in head and neck cancer, including new drugs and biologics

Cases in Head and Neck Cancer: A Multidisciplinary Approach encompasses rich material and resources that demonstrate the complex interface between the diagnostic and clinical information necessary to successfully manage patients with head and neck cancer. This must-read book contains cases written by leading experts in the field that cover a wide variety of head and neck cancers (i.e., tongue base, tonsil, laryngeal, HPV related, etc.) and treatment options, including minimally invasive surgery such as robotic surgery and combined modality treatment protocols. Specifically, this text addresses comprehensive cases from initial evaluation, diagnosis, imaging, and other physiological tests to multidisciplinary treatment management (surgery, chemotherapy, and radiation therapy). Additionally, approaches for the management of toxicities or morbidities of cancer treatment are presented, as well as care plans, discharge plans, and caregiver burden and survivorship issues. Moreover, material on health literacy, humanistic care, and improving communication with assistive technology has been included. Written by clinicians specializing in speech-language pathology, otolaryngology, medical and radiation oncology, pathology, nurse case management, radiology, dietetics, among other fields, this collection of authors provides one of the most complete presentations of the inner workings of the multidisciplinary care team. The adult cases of head and neck cancer reviewed in this text exemplify current practice issues surrounding HPV, minimally invasive robotic surgery and combined modality treatments. Each author threads introductory comments throughout the cases illustrating the critical role of the speech-language pathologist, in particular, and how all clinicians must address coping with survivorship and caregiver burden issues. Cases in Head and Neck Cancer intends to teach future medical practitioners

Features of Multidisciplinary Management of Head and Neck Cancer include: A chapter on the role of HPV infections in head and neck cancer A chapter on new advances in radiotherapy for head and neck cancer, including review IMRT, new standards and potential pitfalls Detailed discussion of the role of chemotherapy in head and neck cancer, including commonly used drugs and how to combine them with radiotherapy to improve patient outcomes Detailed discussion on incorporating novel agents with radiotherapy Detailed discussion of novel therapeutics in head and neck cancer, including new drugs and biologics "

Despite significant progress in the treatment of head and neck cancer using new techniques, including organ preservation strategies, recurrence still occurs in up to 50% of patients with locally advanced disease. Head and Neck Cancer Recurrence is the first comprehensive, evidence-based reference on this complex condition, providing state-of-the-art strategies for treating and managing recurrence at each site within the head and neck. With this book at hand, specialists will have guidelines for detecting the presence of a tumor, evaluating the extent and likelihood of successful salvage, determining the most effective treatment modalities, and assessing the potential impact on outcome and function. Special features: Brings together all the current evidence and expertise on the epidemiology, risk factors, clinical and imaging evaluation, and management of recurrent head and neck cancer tumors Includes both curative and palliative approaches, and discusses surgical, radiotherapeutic, and chemotherapeutic strategic options Contains substantial

contributions by specialists in speech and language therapy, palliative care, psychology, epidemiology, and clinical cancer nursing to provide a holistic, multidisciplinary approach to the management of recurrence of head and neck cancers Brings the decision-making process to life with illustrative case studies that contain patient histories, clinical findings, treatment planning, and documented results The combination of the most recent clinical advances with the latest thinking in the field makes this book an essential resource for all head and neck surgeons, clinical oncologists, radiation oncologists, nurse practitioners, allied health professionals and senior trainees working to improve patient management and outcomes in this challenging arena.

Revised and updated, this edition provides a comprehensive, authoritative approach to head and neck cancer. Page after page is packed with clear and instructive illustrations - line drawings and halftones; fibre optic and microscopic examinations; CT scans; before and after treatment figures; plus many full-colour illustrations.

Nasopharyngeal Cancer - Multidisciplinary Management provides a comprehensive account of the current state of knowledge on nasopharyngeal cancer and its multidisciplinary management. The first ten chapters document contain essential background information on subjects such as epidemiology, pathogenesis, molecular biology, pathology, and the use of imaging in diagnosis and staging. Subsequently, the various treatment options and combinations in a range of settings are examined in depth.

Access Free Multidisciplinary Management Of Head And Neck Cancer

Detailed attention is given to the roles of concurrent, adjuvant, and neoadjuvant chemotherapy and advanced radiotherapy techniques. Further chapters then explore surgical treatment, follow-up, treatment of metastatic disease, treatment-related complications, and nasopharyngeal cancer in children. This is an important book that will prove essential reading for the radiation oncology community worldwide and meet the need for substantial improvements in knowledge of modern techniques.

This comprehensive, multidisciplinary text addresses all aspects of head and neck cancer and represents a wide spectrum of specialists, including surgical, radiation, and medical oncologists, dentists, pathologists, radiologists, and nurses. The book focuses on a two-part approach to treatment that maximizes the chance for a cure while maintaining a strong emphasis on quality of life. This Third Edition's updated techniques section includes new radiation techniques such as IMRT and IGRT and new endoscopic and laser surgical techniques. Other highlights include a new chapter on reconstructive techniques; significant updates to all site-specific chapters; updates on chemoprevention and molecular targeting; and discussions of new imaging modalities such as fused PET/CT. A companion Website will offer the fully searchable text with all images.
