Social scientist Charles Murray shows us why we can no longer hope to roll back the power of the federal government through the normal political process. Murray describes how civil disobedience backstopped by legal defense funds can make large portions of the 180,000-page Federal Code of Regulations unenforceable, through a targeted program that identifies regulations that arbitrarily and capriciously tell us what to do.

The automotive industry appears close to substantial change engendered by “self-driving” technologies. This technology offers the possibility of significant benefits to social welfare—saving lives; reducing crashes, congestion, fuel consumption, and pollution; increasing mobility for the disabled; and ultimately improving land use. This report is intended as a guide for state and federal policymakers on the many issues that this technology raises.

This publication, prepared jointly by the WHO, the World Meteorological Organization and the United Nations Environment Programme, considers the public health challenges arising from global climate change and options for policy responses, with particular focus on the health sector. Aspects discussed include: an overview of historical developments and recent scientific assessments; weather and climate change; population vulnerability and the adaptive capacity of public health systems; the IPCC Third Assessment report; tasks for public health scientists; the health impacts of climate extremes; climate change, infectious diseases and the level of disease burdens; ozone depletion, ultraviolet radiation and health; and methodological issues in monitoring health effects of climate change.

Fully Automated Luxury Communism promises a radically new left future for everyone. New technologies will liberate us from work, providing the opportunity to build a society beyond both capitalism and scarcity. Automation, rather than undermining an economy built on full employment, is instead the path to a world of liberty, luxury and happiness. Solar power will deliver the energy that we need, while asteroid mining will deliver the necessary resources, allowing us to end the devastation of our environment. Innovations in AI, gene editing, food technology will leads us to new ways of living better lives. In his first book, radical political commentator Aaron Bastani conjures a new politics- a vision of a world of unimaginable hope, highlighting how we move to energy abundance, feed a world of nine billion, overcome work, transcend the limits of biology and build meaningful freedom for everyone. Rather than a final destination, such a society heralds the beginning of history.

This handbook serves as a guide to deploying battery energy storage technologies, specifically for distributed energy resources and flexibility resources. Battery energy storage technology is the most promising, rapidly developed technology as it provides higher efficiency and ease of control. With energy transition through decarbonization and decentralization, energy storage plays a significant role to enhance grid efficiency by alleviating volatility from demand and supply. Energy storage also contributes to the grid integration of renewable energy and promotion of microgrid.

"David Harvey examines the internal contradictions within the flow of capital that have precipitated recent crises. While the contradictions have made capitalism flexible and resilient, they also contain the seeds of systemic catastrophe"--

Deals with the result of a study conducted by the FDIC on banking crisis of the 1980s and early 1990s. Examines the evolution of the processes used by FDIC and RTC to resolve banking problems, protect depositors and dispose of the assets of the failed institutions.

Dr. Greg Zacharias, former Chief Scientist of the United States Air Force (2015-18), explores next steps in autonomous systems (AS) development, fielding, and training. Rapid advances in AS development and artificial intelligence (AI) research will change how we think about machines, whether they are individual vehicle platforms or networked enterprises. The payoff will be considerable, affording the US military significant protection for aviators, greater effectiveness in employment, and unlimited opportunities for novel and disruptive concepts of operations. *Autonomous Horizons: The Way Forward* identifies issues and makes recommendations for the Air Force to take full advantage of this transformational technology.
