behavioral skills in neonatal resuscitation were investigated. Study design: Behavioral skills were evaluated via blinded video review of 45 simulated neonatal resuscitations using a validated assessment tool. These were statistically correlated with previously obtained technical skill performance data.

The Neonatal Resuscitation Program® (NRP®) course conveys an evidence-based approach to care of the newborn at birth and facilitates effective team-based care for healthcare professionals who care for newborns at the time of delivery. NRP utilizes a blended learning approach, which includes online testing, online case-based simulations, and hands-on case-based simulation/debriefing that focus on critical leadership, communication, and team-work skills.

The TORA group had higher behavior skill scores in 8 of the 10 NRP key behavioral skills and had higher overall behavioral skill scores (control = 30.1 [\pm 7.2] vs. TORA = 34.9 [\pm 4.8]; $p < 0.001$). CONCLUSION: In resuscitation teams comprising mostly resident physicians, TORA training resulted in better behavioral skills during simulated neonatal resuscitation.
