Patients in the neurointensive care unit pose many clinical challenges for the attending physician. Even experienced clinicians occasionally arrive at the point where diagnostic, work-up, treatment, or prognostic thinking becomes blocked. Neurocritical Care is the next volume in the "What Do I Do Now?" series and provides the clinician with specific focus and insight on interventions in acute neurologic disorders.

Neurocritical care in daily practice pertains to managing deteriorating patients, treatment of complications but also end-of-life care assisting families with difficult decisions. Written with a conversational tone and using a case-based approach, Neurocritical Care emphasizes how to handle comparatively common clinical problems emergently.

Neurocritical Care Board Review: Questions and Answers provides clinicians with a thorough review of the complex subspecialty of Neurocritical Care, using a question-and-answer (Q&A) format. The Q&A format is easily readable, high yield, and serves as good practice for test takers or anyone looking to improve or reinforce essential knowledge. The book covers the key topics pertinent to (and found on) neurocritical care boards, and is organized according to the exam core curriculum outline.. A total of 649 questions address both neuroscience critical care (general neurology, neurotrauma, neurovascular and neurosurgical problems) and general critical care topics (systems trauma, cardiovascular, infectious disease, pulmonary and renal issues, and hemodynamic monitoring). Detailed explanations follow in the answer section of each chapter, along with references for further study. Where relevant, neuroimaging, EEG and monitoring waveforms, and other images are included in case questions to allow candidates to familiarize themselves with these tools that form a significant part of the exam. Features of Neurocritical Care Board Review include: Comprehensive, high-yield review that covers all areas tested on the neurocritical care certifying exam Applicability to a wide range of physicians in multiple specialties reviewing for boards or looking to test skills and clinical acumen in this challenging area Question and answer format with detailed explanations and references to facilitate recall of must-know information and help identify knowledge gaps for further attention Material aggregated from multiple specialties into a singular resource for exam study

Praise for this book: Chapters are clearly written and...[the] black-and-white illustrations and reproductions of cerebral radiographs are of remarkably good quality...an excellent multidisciplinary overview.--Doody's Review From important aspects of the physical examination to imaging studies to treatment options and dosage guidelines, *Decision Making in Neurocritical Care* provides a solid introduction to the evidence-based management of patients in the neurological intensive care unit. Succinct text in a highly accessible bullet-point format details the essentials of history-taking, physical examination, differential diagnosis, diagnostic evaluation, and treatments for a range of neurological problems in the critical care setting. Special features: Brief vignettes of typical cases emphasize key questions for the physician to consider and urgent orders to be given. Coverage of the basics of neurocritical care, including techniques of intubation, ventilator management, sedation, and multimodality monitoring. Pearls and pitfalls highlight key points in patient management. Convenient medication tables, including dosages, adverse effects, and contraindications. Consistent presentation in each chapter enhances ease of use. Ideal for neurologists, neurosurgeons and critical care physicians at all levels, this book is invaluable for optimizing patient care. It is also an excellent choice for board review preparation in these specialties.

Very few hospitals have dedicated neurointensive care units for management of critically ill neurological and neurosurgical patients. Frequently, these patients are managed in the medical or surgical ICU by non-neurologists, who have a hard time appreciating the delicate needs of these patients. This book is a straightforward, practical reference for treating physicians who need to deal with a wide range of complex conditions and associated medical problems. Although comprehensive in scope, Dr Michel T. Torbey has designed this book for neurologists and physicians in the ICU who need a concise and thorough guide to management and treatment. It emphasizes practical state-of-the-art suggestions for management and treatment and provides accessible, easy-to-follow, highly structured, and focused protocols for the assessment, day-to-day management, and treatment of critically ill patients in various ICU divisions.

"Pediatric Neurocritical Care is by far the most comprehensive book I have read dealing with this topic... This text will provide an excellent reference for those interested in the pediatric intensive care cases or pediatrics in general. It is written very well and is chock-full of information that Practitioners in a pediatric ICU setting would use." --Donna Jacobs, R. EEG T., CNIM, *The Neurodiagnostic Journal* Caring for children with neurocritical illness often requires multi-specialty collaboration and the understanding of an ever-expanding body of data. This book gives clinicians the up-to-date, concise, and clinically relevant guidance they need to provide optimal care to children with these acute neurologic disorders. The chapters in *Pediatric Neurocritical Care* are authored by experts in each individual topic, and co-edited by a neurologist and intensivist to ensure that all topics have been fully addressed from both perspectives. The book covers the complete continuum of care from assessment, monitoring, and condition specific management through rehabilitation. Early chapters present differential diagnosis and management approaches to common overarching problems such as coma, headache, and elevated intracranial pressure, followed by chapters focusing on the evaluation and management of specific conditions including traumatic brain injury, stroke, seizures, central nervous system infections, and demyelinating disorders. The final chapters address important associated psychological, social, and ethical issues. To reflect the full spectrum of specialties involved in the burgeoning field of pediatric neurocritical care, the book brings together an international group of experts from multiple disciplines including critical care medicine, anesthesiology, neurology, neurosurgery,

rehabilitation medicine, psychology, and pediatric subspecialties. Pediatric Neurocritical Care features: Every topic is addressed from a neurologic and critical care perspective. Comprehensive coverage includes the evaluation of common overarching problems and management of specific conditions, in addition to discussion of related psychological, ethical, and social issues. Chapters are written by internationally known experts from the fields of critical care medicine, anesthesiology, neurology, neurosurgery, rehabilitation medicine, and many affiliated specialties.

Kumar and colleagues' Neurocritical Care Management of the Neurosurgical Patient provides the reader with thorough coverage of neuroanatomical structures, operative surgical approaches, anesthetic considerations, as well as the full range of known complications relating to elective and non-elective neurosurgical procedures. Drawing upon the expertise of an interdisciplinary team of physicians from neurosurgery, neurology, anesthesiology, critical care, and nursing backgrounds, the text covers all aspects intensivists need to be aware of in order to provide optimal patient care. Over 100 world-renowned authors from multispecialty backgrounds (neurosurgeons, neuro-interventionalists, and neurointensivists) and top institutions contribute their unique perspectives to this challenging field. Six sections cover topics such as intraoperative monitoring, craniotomy procedures, neuroanesthesiology principles, spine and endovascular neurosurgery, and additional specialty procedures. Includes 300 tables and boxes, 70 line artworks, and 350 photographic images. Clinical pearls pulled out of the main text offer easy reference.

This issue of Neurosurgery Clinics of North America is Guest Edited by Drs. Paul Nyquist, Marek Mirski, and Rafael Tamargo, all from The Johns Hopkins Hospital in Baltimore, Maryland. This issue will cover important topics for the neurosurgeon in the Neurocritical Care Unit, including issues in ventilation in the patient with brain injury, ultrasound, seizures, subarachnoid hemorrhage, microdialysis, and management of brain trauma, acute spinal cord injury, and intracranial hemorrhages.

Brain injury is a worldwide leading cause of mortality and morbidity and requires early and appropriate management to minimize these adverse sequelae. Despite such needs, access to specialist centers is limited, forcing both immediate and secondary care of these patients onto generalist staff. These responsibilities are made more problematical by differences in patient management between and even within specialist centers, due in part to an insufficient evidence-base for many interventions directed at brain injury. This book is borne out of the above observations and is targeted at emergency and acute medicine, anesthetic and general intensive care staff caring for brain injury of diverse etiology, or surgical teams responsible for the inpatient care of minor to moderate head trauma. Although explaining the various facets of specialist care, the book is not intended to compete with texts directed at neurosciences staff, but aims to advise on optimal care in general hospitals, including criteria for transfer, by a combination of narrative on pathophysiology, principles of care, templates for documentation, and highly specific algorithms for particular problems. It is intended that the content and structure can form the basis of guidelines and protocols that reflect the needs of individual units and that can be constantly refined. Our ultimate goal is to promote informed, consistent, auditable, multidisciplinary care for this cohort of patients and we hope that this text contributes to that process.

their families. Physicians caring for these patients are often under great distress and need to rapidly assess the situation to allow appropriate stabilization and management. *Emergency Management in Neurocritical Care* gives you the tools you need to perform under pressure in the neurocritical or emergency care unit. The no-nonsense approach corresponds to the attitude needed in both acute emergencies and in the neurocritical care unit. Packed with handy tips to improve your care of patients, and written by internationally renowned experts, the book covers: Acute Management of Neurological Emergencies Cerebrovascular Critical Care Infections of the Nervous System Neuromuscular Complications Encountered in the Intensive Care Unit Neurological Complications and Consultations in General Intensive Care Units Acute Neuroimaging and Neuromonitoring in Neurocritical Care Clinical in approach, practical in execution, *Emergency Management in Neurocritical Care* will help you perform better in pressure situations.

This updated and refined new edition is the only book to provide a comprehensive approach to the intensive care of neurologically injured patients from the emergency room and ICU through the operating room and post-surgical period. It reviews neuroanatomy, neuroradiology, and neurophysiology, examines the neurological problems most frequently seen in intensive care, and describes the various types of neurosurgery. General issues are discussed, such as cardiac care, fluids and electrolytes, nutrition, and monitoring as well as more specific conditions and complications including elevated intracranial pressure, seizures, and altered mental states.
