This book, in MCQ format, is a comprehensive tool that will help Nuclear Medicine and Radiology residents and attending physicians to understand concepts in nuclear medicine. Questions cover clinical applications of nuclear medicine techniques to the cardiovascular, pulmonary, endocrine, skeletal, gastrointestinal, genitourinary, and central nervous systems. In addition, topics in physics, radiopharmacy, and radiation safety are addressed. The MCQ format closely resembles that used in board examinations in nuclear medicine. Each question has four possible answers, only one of which is correct. About 60% of the questions are linked to clinical cases, with each case having four questions on average, along with one or two images. The remainder of the questions are free-standing, with or without an image. Answers are concise but are supported by references to the literature when necessary. Pearls in boxes are used to highlight the most important pieces of information. While the questions are scrambled, as in board exams, an index categorizes each question into one of the systems or topics.

Written specifically for those candidates about to sit for the FRCR part II examination, the format will also be of use to other trainee radiologists who are not specialists in this field. It contains a number of multiple choice questions covering all aspects of nuclear medicine with particular emphasis on the more common techniques, ie bone, renal and lung scanning. Extensive use is made of review articles, and important articles in the major nuclear medicine journals and references are provided.
