Medicine: Medicine is the main application of organic compounds. Though not all but many drugs are made of organic substances. Like antibiotics, anticancer drugs, painkillers, anti-depressant, anesthetics, cardiac drugs, etc. In medicine, organic chemistry finds its use in three ways like the drugs, to study the disease and for diagnosis.

Organic chemistry is a branch of chemistry that studies the structure, properties and reactions of organic compounds, which contain carbon in covalent bonding. Study of structure determines their chemical composition and formula. Study of properties includes physical and chemical properties, and evaluation of chemical reactivity to understand their behavior.
