Cause. Encoder communication line breakage fault protection Err21.0, and Encoder communication fault protection Err21.1 are generated if the serial data from the encoder has not been correctly received. The cause of failing to receive normal communication is indicated by Err21.0 for no response, and Err21.1 for faulty data.

What is the cause and method of rectifying Err ... - Panasonic
If no improvement can be seen or the problem cannot be identified, turn on the servo with the motor power cable disconnected. If Err14 is generated by turning the shaft only a little, then amplifier breakage is possible. If no error is generated, possible faults include a broken motor grounding wire, motor wire contact failure, or motor failure.

What is the cause and method of rectifying Err ... - Panasonic
[2] Check if the electromagnetic brake is released Supply +24 V DC to release the brake. In the servo off state, check if it can be rotated. If it will not rotate, check the 24 V power and wiring. [3] Rotate the motor in the servo off state. If it is stiff and will not move, check to see if the mechanism or speed reducer is jammed.
