Furthermore, pile design has usually linked, at least implicitly, consideration of ultimate and serviceability limit states; this remains the case in Eurocode 7. In the event, specifying how calculation and testing should be used together proved to be a major challenge in drafting the UK National Annex. An extensive consultation among pile designers was undertaken to reach the consensus, which was published in November 2007. The paper is published in two parts.

Eurocode 7 was first published in 2004, was fully adopted in the UK in 2010 and has subsequently been re-published as British Standard BS EN 19971:2004+A1:2013 together with the UK National Annex - NA+A1:2014. For pile design, reference should also be made to BS EN 1990:2002+A1:2005 together with other relevant Eurocodes and the UK national annexes.

Need for a standard pile schedule . Although pile design to Eurocode 7 has been adopted in the UK since March 2010, it is still rather surprising that the industry has not broadly adopted a suitable format for issuing pile loading information (Selemetas and Bell, 2014). The requirements of Eurocode design can
