Metamorphic rock is formed by the alteration of pre-existing rock deep within Earth (but still in the solid state) by heat, pressure, and/or chemically active fluids. The Rock Cycle. 3.1 The Rock Cycle. Shows the interrelationships among the three rock types (igneous, sedimentary, and metamorphic) Magma is molten material that forms deep beneath the Earth's surface. Lava is magma that reaches the surface. Weathering is a process in which rocks are broken down by water, air, and living ...
