Update – Insertion, modification, and deletion of the actual data. Retrieval – Providing information in a form directly usable or for further processing by other applications.

## Database - Wikipedia

This course covers the architecture of modern data storage and processing systems, including relational databases, cluster computing systems, streaming and machine learning systems. Topics include database system architecture, storage, query optimization, transaction management, fault recovery, and parallel processing, with a focus on the key design ideas shared across many types of data-intensive systems.
