A PLC (Programmable Logic Controllers) is an industrial computer used to monitor inputs, and depending upon their state make decisions based on its program or logic, to control (turn on/off) its outputs to automate a machine or a process. NEMA defines a PROGRAMMABLE LOGIC CONTROLLER as: "A digitally operating electronic apparatus which uses a programmable memory for the internal storage of instructions by implementing specific functions such as logic sequencing, timing, counting, and ...

What is PLC ? Programmable Logic Controller - Unitronics  
A programmable logic controller (PLC) is a small, modular solid state computer with customized instructions for performing a particular task. PLCs, which are used in industrial control systems for a wide variety of industries, have largely replaced mechanical relays, drum sequencers and cam timers. PLCs are useful tools for repeatable processes because they have no mechanical parts and they can ...
