Expanding on the information included in the manufacturer's official flight manual, which is compiled in strictly controlled test conditions, this guide details the performance and handling characteristics and limitations of the popular Robinson R22 helicopter in real-world flight conditions. It includes specialized preflight checklists, listing of R22 manufacturer safety notices, and preflight planning conversion tables providing pilots with invaluable information about what to expect when flying an R22 and how to operate one safely in a wide variety of flight situations.

This manual brings large aircraft systems training to the entry level helicopter pilot. Richard Theriault is an experienced pilot and flight instructor with over 38 years of experience. He holds an Airline Transport Pilot and instructor certificates in both airplanes and helicopters. He has experience in a wide range of airplanes from the Piper J-3 to the B727 and helicopters from the R22 to the Bell 212.

Providing a detailed look at helicopter maneuvers, the information in this guide helps to solidify concepts gained from flight training in a student pilot's mind by incorporating the Practical Test Standards into every maneuver description. The graphical and textual explanations work in conjunction with an instructor's lessons, allowing students to prepare before sessions and to review afterwards as well. Because helicopter pilots must rely on their memory or understanding of a particular maneuver, the Helicopter Maneuvers Manual provides readers with a crystal-clear picture of what level of performance is expected of them every step and includes insights into the common errors associated with each move.

This book expands the information the factory provided pilot's operating handbook (POH) gives and provides valuable information for pilots flying or going to fly the Robinson R-44. Be able to do a more thorough, knowledgeable Pre-Flight inspection and get a better understanding about the R-44's features by reading the enhanced System descriptions.For the pilot to get a more thorough safety understanding the Robinson Awareness Training is included, as well as a special emphasis on the Performance and Loading Limits of this specific helicopter.
