Create your own electronic devices with the popular IOIO ("yoyo") board, and control them with your Android phone or tablet. With this concise guide, you'll get started by building four example projects—after that, the possibilities for making your own fun and creative accessories with Android and IOIO are endless. To build Android/IOIO devices, you write the program on your computer, transfer it to your Android, and

then communicate with the IOIO via a USB or Bluetooth connection. The IOIO board translates the program into action. This book provides the source code and step-by-step instructions you need to build the example projects. All you have to supply is the hardware. Learn your way around the IOIO and discover how it interacts with your Android

Build an intruder alarm that sends a text message when it detects movement
Make a temperature sensing device that logs readings on your Android
Create a multicolor LED matrix that displays a Space Invader animation

opportunity to have in their tablets, iPhones, iPads and PCs a powerful source of ideas for projects and informations. Microcrocontrollers such as Arduino, MSP430, PICs and others can ?t source a large amount of current to loads like motors, relays and lamps. They also can ?t work with signals sourced by some types of sensors plugged to their inputs. In these cases they need special ads, circuits to allow the use of power loads and sensor. These circuits are called shields. This book is a collection of 100 circuits of shields including drive to high current loads, motors, sensor, to produce audio signals and much more.
