In innumerable discussions and activities dedicated to better understanding and helping teenagers, one aspect of teenage life is curiously overlooked. Very few such efforts pay serious attention to the role of religion and spirituality in the lives of American adolescents. But many teenagers are very involved in religion. Surveys reveal that 35% attend religious services weekly and another 15% attend at least monthly. 60% say that religious faith is important in their lives. 40% report that they pray daily. 25% say that they have been "born again." Teenagers feel good about the congregations they belong to. Some say that faith provides them with guidance and resources for knowing how to live well. What is going on in the religious and spiritual lives of American teenagers? What do they actually believe? What religious practices do they engage in? Do they expect to remain loyal to the faith of their parents? Or are they abandoning traditional religious institutions in search of a new, more authentic "spirituality"? This book attempts to answer these and related questions as definitively as possible. It reports the findings of The National Study of Youth and Religion, the largest and most detailed such study ever undertaken. The NYSR conducted a nationwide telephone survey of teens and significant caregivers, as well as nearly 300 in-depth face-to-face interviews with a sample of the population that was surveyed. The results show that religion and spirituality are indeed very significant in the lives of many American teenagers. Among many other discoveries, they find that teenagers are far more influenced by the religious beliefs and practices of their parents and caregivers than commonly thought. They refute the conventional wisdom that teens are "spiritual but not religious." And they confirm that greater religiosity is significantly associated with more positive adolescent life outcomes. This eagerly-awaited volume not only provides an unprecedented understanding of adolescent religion and spirituality but, because teenagers serve as bellwethers for possible future trends, it affords an important and distinctive window through which to observe and assess the current state and future direction of American religion as a whole.

Abstract: Self-esteem is known to have positive associations with people's mental health and problem behaviors of adolescents. Religiosity is also often reported to have positive influence on mental health and behaviors of adolescents. If so, self-esteem and religiosity could be expected to have positive influences on immigrant adolescents who struggle with additional issues brought up by the acculturation process. Thus, this study reviewed the literature to examine what influences self-esteem and religiosity have on immigrant adolescents and in what ways. /p/ Two demographic factors turned out to have significant associations with self-esteem during adolescence. Boys tended to show higher scores in self-esteem than girls did. African American adolescents and Latinos displayed higher self-esteem, while Asian Americans marked the lowest level of self-esteem. Other factors included body satisfaction, problem behaviors, parent-child relations, social support, depression, and academic achievement. /p/ Religiosity was related to less involvement in risk behaviors, substance use, and mental problems. However, it was not significantly related to sexual activity factors. It is also noteworthy that while religiosity was related to mental health, the relationship between religiosity and self-esteem was different by the factors of religiosity. Although it was not causal,

Online Library Religiosity Spirituality And Adolescents Self Adjustment

frequency of church service attendance and involvement in youth activities were positively associated with self-esteem. However, it was hard to see a relationship between the importance of religion factor and self-esteem. /p/ Immigrant adolescents often experienced hard times due to discrimination, peer relationships, pressure from academic achievement, and conflict with their parents. The influence of religiosity was found in two aspects. Religious involvement has direct and indirect influences on the lives of adolescents. Being a member of the religious community and faith in God provided behavioral guidance for immigrant adolescents, and being a Christian affected developing their self-identity and purpose of life. Besides, the local ethnic church provided social support for immigrant adolescents who relatively received lack of social support from their parents compared to non-immigrant adolescents. /p/ To help immigrant adolescents develop healthy self-esteem and so live a better life, a few ministry practices are recommended for the ethnic church and its youth workers and parents of immigrant adolescents.

This report, based on nationally representative survey data, this report indicates that religious U.S. 12th graders have significantly higher self-esteem and hold more positive attitudes about life in general than their less religious peers. Of the 13 attitudinal variables this report examines, only one was not significantly related to some dimension of religion when controlling for the effects of nine other variables such as age, race, sex and family structure. The religion factors most commonly related to these outcomes are religious service attendance and importance of religion, although religious affiliation and youth group participation were also important in many cases.

This volume presents multidisciplinary perspectives on the role of cultural values and religious beliefs in adolescent development.

This Handbook draws together leading social scientists in the world from multiple disciplines to articulate what is known and needs to be known about spiritual development in childhood and adolescence.

What is the future of religion given the responses of young people? What impact do existing religious forms have on youth? What kind of spirituality and religion are young people creating for themselves? Religion and Youth presents an accessible guide to the key issues in the study of youth and religion, including methodological perspectives. It provides a key teaching text in these areas for undergraduates, and a book of rigorous scholarship for postgraduates, academics and practitioners. Offering the first comprehensive international perspective on the sociology of youth and religion, this book reveals key geographical and organisational variables as well as the complexities of the engagement between youth and religion. The book is divided into six parts organised around central themes: Generation X and their legacy; The Big Picture - surveys of belief and practice in the USA, UK and Australia; Expression - how young people construct and live out their religion and spirituality; Identity - the role of religion in shaping young people's sense of self and social belonging; Transmission - passing on the faith (or not); Researching Youth Religion - debates, issues and techniques in researching young people's religion and spirituality. James A. Beckford writes the Foreword and Linda Woodhead the Epilogue.
