## Surgical Guide To Theory

A vitrectomy is a type of eye surgery that treats problems with the retina or the fluid in the eye called the vitreous. Find out how it's done, recovery time, risks, and more.

### Vitrectomy: Purpose, Procedure, Risks, Recovery

Description This volume in the new Surgical Techniques in Ophthalmology series offers step-by-step authoritative guidance on how to successfully perform basic retina and vitreous surgery for retinal detachments, and epiretinal membranes as well as more involved procedures such as complex scleral buckle for ROP and vitrectomy surgery for PVR.

### Retina and Vitreous Surgery | ScienceDirect

# Access Free Retina And Vitreous Surgery A

During vitrectomy surgery, your eye doctor will make very small openings in your eye wall and remove most of the vitreous from your eye with a suction tool. Depending on your treatment plan, your doctor may also: Use a laser or freeze treatment to reattach or repair your retina

## [Vitreotomy | National Eye Institute](#)

A vitrectomy is a surgical procedure that removes the vitreous in the central cavity of the eye so that vision can be corrected. It is beneficial in many eye conditions including diabetic eye disease (diabetic retinopathy), retinal detachments, macular hole, macular pucker and vitreous hemorrhage. Vitreoretinal surgery refers to any operation to treat eye problems involving the retina, macula, and vitreous fluid. These include retinal detachment, macular hole, epiretinal membrane and complications related to diabetic retinopathy.

## Vitreo-retinal - Moorfields Eye Hospital

Also called vitrectomy, it is the surgical removal of the vitreous gel from the middle of the eye. Such surgery may be performed if this gel is pulling the retina from its normal position, or if blood and scar tissue are obscuring light passing through to the retina, causing blurred vision.

3. Pars plana vitrectomy surgery. In vitrectomy, the vitreous is removed to relieve traction or pulling from the vitreous on the retina. All of the retinal breaks are identified and traction from the vitreous is removed from the breaks in particular. The fluid under the retina is drained through one of the breaks and laser is applied to seal the breaks.

## Surgery of the Retina, Vitreous, and Macula - Retina ...

The vitreous is the gel-like fluid that fills your eye. It's full of tiny fibers that attach to your retina (the light-sensitive layer of tissue at the back of the eye). As you get older, the fibers of your vitreous pull away from the retina. This is called vitreous detachment.
