The old masters of dealt only with the static features of the positional rules of chess. But these are insufficient to explain the basics of chess. The problem is that chess, like in other sciences, has undergone a dynamic revolution, but chess literature doesn't yet reflect it. In this major work Aagaard accessibly explains the rules of attack (the exploitation of a dynamic advantage), balanced between understandable examples, and deep analysis. Five years in the making, this book deals with weak kings, sacrifices, various minor attacking themes, intuitive sacrifices, opposite castling, modern king hunts, and enduring initiative.

The goal of this book is to help students learn to use LabVIEW on their own. Very art-intensive with over 400 figures in all. There are numerous screen captures in each section taken from a typical LabVIEW session. The figures contain additional labels and pointers added to the LabVIEW screen captures to help students understand what they are seeing on their computer screens as they follow along in the book. A directory of virtual instruments has been developed by the author exclusively for use by students using Learning with LabVIEW and is available on www.pearsonhighered.com/bishop. These virtual instruments complement the material in the book. In most situations, the students are asked to develop the virtual instrument themselves following instructions given in the book, and then compare their solutions with the solutions provided by the author to obtain immediate feedback. In other cases, students are asked to run a specified virtual instrument as a way to demonstrate an important LabVIEW concept. Critics have routinely excluded African American literature from ecocritical inquiry despite the fact that the literary tradition has, from its inception, proved to be steeped in environmental concerns that address elements of the natural world and relate nature to the transatlantic slave trade, plantation labor, and nationhood. Toni Morrison's work is no exception. Toni Morrison and the Natural World: An Ecology of Color is the first full-length ecocritical investigation of the Nobel Laureate's novels and brings to the fore an unequalled engagement between race and nature. Morrison's ecological consciousness holds that human geographies are enmeshed with nonhuman nature. It follows, then, that ecology, the branch of biology that studies how people relate to each other and their environment, is an apt framework for this book. The interrelationships and interactions between individuals and community, and between organisms and the biosphere, are central to this analysis. They highlight that the human and nonhuman are part of a larger ecosystem of interfacing and transformations. Toni Morrison and the Natural World is organized by color, examining soil (brown) in The Bluest Eye and Paradise; plant life (green) in Song of Solomon, Beloved, and Home; bodies of water (blue) in Tar Baby and Love; and fire (orange) in Sula and God Help the Child. By providing a racially inflected reading of nature, Toni Morrison and the Natural World makes an important contribution to the field of environmental studies and provides a landmark for Morrison scholarship.
