The Consultation,
published almost 20 years
ago by the same authors,

has been completely
rewritten. The New
Consultation will be an
essential aid for all
doctors and their
educators to increase the
effectiveness of their
consultations and to help
to make them more
patient-centred. It
includes theoretical
background as well as
practical help for both
consulters and teachers.

The consultation is 'the central act of medicine': the meeting between the patient and the doctor.

The first part of the book takes the reader from the context of the consultation in society and with the medical profession, to the intimacy of the consulting room, and then delves into its processes. The reader is

Acces PDF Skilful Time

invited to share the individual perspectives of doctor and patient and to consider what will lead to positive outcomes. The last chapter of the first section puts all these factors together and provides a coherent, evidence-based description of the processes needed for an effective consultation for the patient, the doctor,

and society. The second part of the book takes the reader into the practicalities of learning and teaching effective consultations. It starts with a brief description of the evidence for effective teaching and outlines the authors' experience of teaching in this way with over 1,000 doctors. Realizing that many doctors organize their

own self-directed learning, the authors have included a chapter that enables individuals to develop their own consulting technique. Help is offered for teachers of the consultation in both undergraduate and postgraduate settings. The consultation is now assessed by a number of the royal medical colleges

to measure competence and there is a chapter on these issues. The last chapter discusses the difficulties that many doctors still have in conducting patient-centred consultations and makes some suggestions for effective implementation of skills.
