Stochastic Fuzzy Differential Equations With Stochastic fuzzy differential equations with an application 125 where  $\|\cdot\|$  denotes a norm in  $\mathbb{R}^d$ . It is known that  $K(\mathbb{R}^d)$  is a complete and separable metric space with respect to  $d_H$ . If  $A, B, C \in K(\mathbb{R}^d)$ , we have  $d_H(A + C, B + C) = d_H(A, B)$  (see e.g. Laksh- mikantham, Mohapatra).

## AN APPLICATION

In this paper we present the existence and uniqueness of solutions to the stochastic fuzzy differential equations driven by Brownian motion. The continuous dependence on initial condition and stability properties are also established. As an example of application we use some stochastic fuzzy differential equation in a model of population dynamics.

[PDF] Stochastic fuzzy differential equations with an ...

We write the stochastic fuzzy differential equations with delay (stochastic fuzzy functional differential equations) in their symbolic form as follows: (4.1)  $dx(t) = J P. 1 f(t, x_t) dt + \sigma g(t, x_t) dB(t)$ ,  $x_t = P. 1$ , where  $x(t)$  denotes the value of the fuzzy stochastic process  $x$  at the instant  $t$ , and  $x_t = \{x(t +$

set processes. This is achieved by obtaining almost sure boundedness of solutions to stochastic differential equations with set coefficients.

On Stochastic Differential Equations with Fuzzy Set ...

The topic of fuzzy stochastic differential equations with solutions that are the fuzzy stochastic processes with continuous sample paths is very new and its foundations are contained in . Such equations generalize both the deterministic fuzzy differential equations and the crisp stochastic differential equations . They join together some features of each kind of mentioned equations to offer a mathematical apparatus appropriate in description of dynamic systems evolving in fuzzy and ...

Fuzzy stochastic differential equations of decreasing ...  
The first aim of the paper is to present a survey of possible approaches for the study of fuzzy stochastic differential or integral equations. They are stochastic counterparts of classical approaches known from the theory of deterministic fuzzy differential equations. For our aims we present first a notion of fuzzy stochastic integral with a semimartingale integrator and its main properties. Next we focus on different approaches for fuzzy stochastic differential equations.

Stochastic fuzzy differential equations with an ...

A stochastic differential equation (SDE) is a differential equation in which one or more of the terms is a stochastic process, resulting in a solution which is also a stochastic process. SDEs are used to model various phenomena such as unstable stock prices or physical systems subject to thermal fluctuations. Typically, SDEs contain a variable which represents random white noise calculated as the derivative of Brownian motion or the Wiener process. However, other types of random behaviour are po
