Strings](#)

$T \text{ (Tension)} = (UW \times (2 \times L \times F)^2) / 386.4$

*Page 10/34*

# Get Free String Tension Charts For Tuning Elixir Strings

To convert the result into Newtons, simply multiply by 4.45. If you know what tension you want the string to have, you can calculate the string unit weight. You can then use the charts in this guide to locate a string with approximately the same desired unit weight. UW (unit weight) =  $(T \times 386.4) / (2 \times L \times F)^2$

# Get Free String Tension Charts For Tuning Elixir Strings

When tuning, you are simply applying tension on the strings until they reach a certain note. The string is built such that it hits the given note at the right tension without breaking. Each string can nominally support around 40% tension, beyond which point it will break. The string is fixed at two ends: at the bridge
