Four surgical approaches required a superficial parotidectomy with identification of the facial nerve, one of which revealed an aberrant facial nerve. In one case the tract was found to travel into the angle of the mandible, terminating as a mandibular cyst. This required en bloc excision that included the lateral cortex of the mandible.

Otologic and Neurotologic Surgery is part of the series Surgical Techniques in Otolaryngology – Head & Neck Surgery. The book presents practitioners with the latest advanced in surgery of the ear. Edited by a team of recognised US-based otolaryngologists, this authoritative atlas is unique in its scope. Each chapter discusses various otologic and neurotologic disorders followed by a detailed description of the surgical procedure used to treat the condition, and its related complications. The atlas is richly illustrated with full colour intraoperative photographs and drawings to enhance the description of each operative procedure. Newer surgical procedures such as over/under tympanoplasty, superior canal dehiscence repair and endoscopic approaches to the posterior fossa are introduced and discussed in detail, making this atlas an essential resource for ENT surgeons to keep up-to-date with current practice. Key points Coverage of tympanoplasty, mastoidectomy and stapedectomy techniques, cochlear implantation and skull base surgical procedures Edited by experts from William Beaumont School of Medicine and Michigan State University Other topics in the series: sinonasal surgery, laryngeal surgery, facial plastic and reconstructive surgery, and paediatric otolaryngologic surgery

Designed for trainees at all levels, ENT and Head and Neck Procedures: An Operative Guide provides concise, step-by-step instructions to the core otolaryngology, head and neck, and facial plastics procedures that surgeons are likely to encounter in daily practice. Convenient and portable, this guide provides enough information to allow trainees to perform the operations themselves under appropriate supervision. Concise surgical steps for each procedure are followed by detailed explanations. Clear diagrams and photographs demonstrate the important stages of each operation. Surgeons' tips bridge the gap between the theory and what actually works on the operating table. The book also includes an easy reference table of complications that should be discussed with the patient when obtaining consent. The authors have used their wealth of experience to write a practical guide that that will give trainees the skills as well as the confidence they will need in the surgical arena.

This book covers the scope of cranial nerve monitoring of all cranial nerves that are of practical importance in head, neck, and thyroid surgery. It discussed enhanced patient outcomes in a wide array of surgical procedures in the head and neck that require the maintenance of complex regional functions by protecting cranial nerve integrity. Organized into four parts, the book begins with Part I offering historical perspectives on the subject while simultaneously reviewing various basic and advanced electrophysiology. Part II thoroughly reviews the extra-temporal bone facial nerve (CN VII), Glossopharyngeal Nerve (CN IX), Vagal/Recurrent Laryngeal Nerve (CN X), Spinal Accessory Nerve (CN XI), and Hypoglossal Nerve (CN XII). Subsequent chapters in Part III provide a complete and applied understanding of the neurophysiological principles that facilitate the surgeon 's ability to monitor any nerve and intraoperative neural stimulation and nerve monitoring. The book presents various techniques as the standard of care to provide optimal neural detection, understand the neural functional real-time status during surgery and optimize specific surgical outcomes such as thyroid surgical outcomes. Closing chapters offer essential conversations regarding ethical considerations in nerve monitoring and medical malpractice. Filling a gap in the literature, Intraoperative Cranial Nerve Monitoring in Otolaryngology: Head and Neck Surgery provides a single source for surgeons who wish to optimize their outcomes in patient care and accelerate their learning curve to the level of more experienced surgeons.
