Following Farhadi, Jafarpour and Birjandi's (1994) functional approach to language testing, Ahmadi, et. al. (2011), constructed a test to investigate the impact of input-based and output-based tasks on the development of Iranian EFL learners's™ recognition of the requestive downgraders.

Introducing English for Specific Purposes presents the key concepts and practices of ESP in a modern, balanced, and comprehensive way. This book defines ESP and shows how the approach plays a crucial role in the world of English language teaching. Explaining how needs analysis, language and learning objectives, materials and methods, and evaluation combine to form the four main pillars of ESP, the book includes: practical examples that illustrate how the core theories and practices of ESP can be applied in real-world academic and occupational settings; discussion of some of the most hotly debated issues in ESP; insights on how ESP courses can be organized and integrated to form a complete program; reflection boxes, practical tasks, extension research questions, and resources for further reading in each chapter. Introducing English for Specific

Purposes serves as an ideal textbook for graduate and advanced undergraduate students studying courses on English for Specific Purposes or English for Academic Purposes, as part of degrees in English for Specific Purposes, Education, ELT, Applied Linguistics, TESOL or TEFL. This comprehensive publication is also an invaluable reference resource for pre-service and in-service teachers of ESP, and for English program managers and administrators.

Practical Language Testing equips you with the skills, knowledge and principles necessary to understand and construct language tests. This intensely practical book gives guidelines on the design of assessments within the classroom, and provides the necessary tools to analyse and improve assessments, as well as deal with alignment to externally imposed standards. Testing is situated both within the classroom and within the larger social context, and readers are provided the knowledge necessary to make realistic and fair decisions about the use and implementation of tests. The book explains the normative role of large scale testing and provides alternatives that the reader can adapt to their own context. This fulfils the dual purpose of providing the reader with the knowledge they need to prepare learners for tests, and the practical skills for using assessment for learning. Practical Language Testing is the ideal introduction for students of applied linguistics, TESOL and modern foreign language teaching as well as practicing teachers required to design or implement language testing programmes. The book is supported by frequently updated online resources at <http://languagetesting.info/> including sets of scenarios providing resources to study aviation English assessment, call centre assessment, military language assessment, and medical language assessment. The materials can be used to structure debates and seminars, with pre-reading and video activities. Practical Language Testing was commended as a 2012 runner-up of the prestigious SAGE/ILTA Award for Best Book on Language Testing.

Practical procedures for teachers to follow at every stage are outlined, including ways to stimulate students to write through pictures, readings and discussions, and ways to respond to student writing as a form of communication.

This book constitutes the refereed proceedings of the 7th International Conference on Big Data analytics, BDA 2019, held in Ahmedabad, India, in December 2019. The 25 papers presented in this volume were carefully reviewed and selected from 53 submissions. The papers are organized in topical sections named: big data analytics: vision and perspectives; search and information extraction; predictive analytics in medical and agricultural domains; graph analytics; pattern mining; and machine learning.

This monograph provides a unified view, as well as a detailed presentation of the important ideas and insights needed to understand and create modern dialogue agents that will be instrumental to making world knowledge and services accessible to millions of users in ways that seem natural and intuitive.

A learner-centred teaching orientation begins with the premise that the learner is the central reference point in decision making because: - needs analysis and goal-setting can be more effective if students inform them with their own knowledge and experience; - learning is more successful if methodology and study mode take into account student preferences and characteristics. This book provides a framework of theory, discussion and practical guidelines to help teachers implement these principles in a sensitive and flexible manner in response to the specific features both of their students and of the wider context of learning. The book also examines the implications a learner-centred approach has in terms of the role and responsibilities of the teacher.

This four-volume handbook covers important concepts and tools used in the fields of financial econometrics, mathematics, statistics, and machine learning. Econometric methods have been applied in asset pricing, corporate finance, international finance, options and futures, risk management, and in stress testing for financial institutions. This handbook discusses a variety of econometric methods, including single equation multiple regression, simultaneous equation regression, and panel data analysis, among others. It also covers statistical distributions, such as the binomial and log normal distributions, in light of their applications to portfolio theory and asset management in addition to their use in research regarding options and futures contracts. In both theory and methodology, we need to rely upon mathematics, which includes linear algebra, geometry, differential equations, Stochastic differential equation (Ito calculus), optimization, constrained optimization, and others. These forms of mathematics have been used to derive capital market line, security market line (capital asset pricing model), option pricing model, portfolio analysis, and others. In recent times, an increased importance has been given to computer technology in financial research. Different computer languages and programming techniques are important tools for empirical research in finance. Hence, simulation, machine learning, big data, and financial payments are explored in this handbook. Led by Distinguished Professor Cheng Few Lee from Rutgers University, this multi-volume work integrates theoretical, methodological, and practical issues based on his years of academic and industry experience.

New Interchange is a multi-level series for adult and young-adult learners of English from the beginning to the high-intermediate level. The Lab Guide can be purchased for use with the Lab Audio Cassettes. The guide provides varying levels of support for the learner: Part A contains only the directions to each exercise, Part B contains the script for each exercise without the responses, and Part

C contains the complete script for each exercise with the responses.

Presents cutting-edge, evidence-based interventions for dealing with specific difficulties of reading comprehension in children aged 7-11. An in-depth introduction to the 'poor comprehender profile', which describes children who despite being fluent readers have difficulty extracting meaning from text. Sets out a range of practical interventions for improving reading skills in this group - along with comprehensive guidance on assessment and monitoring, and insightful accounts of professionals' experience in delivering the techniques described. Includes an overview of psychological theories of reading comprehension, evaluating their practical applicability.

Offers a discussion of the basic concerns which underlie the development and use of language tests. Presenting a synthesis of research on testing, this book is useful for students on teacher education courses. It is also helpful for those professionally involved in designing and administering tests, acting as a complement to 'how to' books.
