The Neurosequential Model in Education™

The Boy Who Was Raised as a Dogis a collection of case studies from a child psychiatrist, Dr. BrucePerry, who uses his expertise in brain development and neuroscience to study how traumatic experiences shape behavior in children. Each chapter focuses on an individual child 's case, including a child who was raised in a kennel, one who murdered two teenage girls, and another who witnessed her mother get killed.

A renowned psychiatrist reveals how trauma affects children-and outlines the path to recovery "Fascinating and upbeat....Dr. Perry is both a world-class creative scientist and a compassionate therapist." (Mary Pipher, PhD) How does trauma affect a child's mind--and how can that mind recover? In the classic The Boy Who Was Raised as a Dog, Dr. Perry explains what happens to the brains of children exposed to extreme stress and shares their lessons of courage, humanity, and hope. Only when we understand the science of the mind and the power of love and nurturing, can we hope to heal the spirit of even the most wounded child.

Child psychiatrist Bruce Perry has treated children faced with unimaginable horror: genocide survivors, witnesses, children raised in closets and cages, and victims of family violence. Here he tells their stories of trauma and transformation.

In 1967, after a twin baby boy suffered a botched circumcision, his family agreed to a radical treatment that would alter his gender. The case would become one of the most famous in modern medicine—and a total failure. As Nature Made Him tells the extraordinary story of David Reimer, who, when finally informed of his medical history, made the decision to live as a male. A macabre tale of medical arrogance, it is first and foremost a human drama of one man's—and one family's—amazing survival in the face of terrible odds.

The groundbreaking exploration of the power of empathy by renowned child-psychiatrist Bruce D. Perry, co-author, of Oprah Winfrey, of What Happened to You? Born for Love reveals how and why the brain learns to bond with others—and is a stirring call to protect our children from new threats to their capacity to love. " Empathy, and the ties that bind people into relationships, are key elements of happiness. Born for Love is truly fascinating. " — Gretchen Rubin, author of The Happiness Project From birth, when babies' fingers instinctively cling to those of adults, their bodies and brains seek an intimate connection, a bond made possible by empathy—the ability to love and to share the feelings of others. In this provocative book, psychiatrist Bruce D. Perry and award-winning science journalist Maia Szalavitz interweave research and stories from Perry's practice with cutting-edge scientific studies and historical examples to explain how empathy develops, why it is essential for our development into healthy adults, and how to raise kids with empathy while navigating threats from technological change and other forces in the modern world. Perry and Szalavitz show that compassion underlies the qualities that make society work—trust, altruism, collaboration, love, charity—and how difficulties related to empathy are key factors in social problems such as war, crime, racism, and mental illness. Even physical health, from infectious diseases to heart attacks, is deeply affected by our human connections to one another. As Born for Love reveals, recent changes in technology, child-rearing practices, education, and lifestyles are starting to rob children of necessary human contact and deep relationships—the essential foundation for empathy and a caring, healthy society. Sounding an important warning bell, Born for Love offers practical ideas for combating the negative influences of modern life and fostering positive social change to benefit us all.

Dr. Lynn Ponton has devoted her clinical practice to a particular community -- teenagers in trouble. Whether these kids are struggling with peers, experimenting with drugs, stealing cars, or having unprotected sex, they have something in common: they are all involved in unhealthy risk-taking. And their parents are scared. "How did my child get involved in this dangerous situation?" they ask. "And what can I do?"Their fears are justified: today's teens have more opportunities for taking dangerous risks than ever before. But in The Romance of Risk, Dr. Ponton refutes the traditional idea that risk-taking is primarily an angry power struggle with parents -- so-called teenage rebellion -- and re-defines it as a potentially positive testing process whereby challenge and risk are the primary tools adolescents use to find out who they are and determine who they will become. This new perspective is revealed in a series of mesmerizing tales about individual adolescents and their families. Among others, we meet Jill, a 13-year-old thrill-seeking runaway; Hannah, a privileged daughter of suburbia who suffers from anorexia; and Joe, a high school senior with a serious drinking problem. Through these stories, we come to understand Dr. Ponton's startling observation that teenagers must confront and experience challenge and risk along the path to self-discovery. For adolescents, the powerful allure of the adult world is equaled only by the fear of failing to find a place in it. Parents can ease that transition into adulthood, however, by promoting healthy risk-taking so that dangerous options will be avoided. In The Romance of Risk, parents will learn how they can begin to understand rather than fear adolescent risk-taking, and how to communicate with their children about it. After all, teenagers will always romanticize risk. But with the support and guidance of parents and other adults, odds are the risks they take will be the right ones.

This humorous tale of a curious young boy and his single-minded quest for knowledge is a heartfelt and affectionate tribute to librarians everywhere. Every day after school Melvin goes to the library. His favorite people--Marge, Betty, and Leola--are always there behind the reference desk. When something interests Melvin, his librarian friends help him find lots and lots of books on the subject. When he collects creepy bugs in a jar, they help him identify, classify, and catalog the insects. As the years pass, Melvin can always find the answers to his questions--and a lot of fun--in the library. Then one day he goes off to college to learn new things and read new books. Will he leave the library and his friends behind forever? Readers will enjoy Brad Sneed's delightful illustrations that colorfully capture the fun-loving spirit of Carla Morris's story about the contagious enthusiasm of learning.
