The Design of Active Crossovers is a unique guide to the design of high-quality circuitry for splitting audio frequencies into separate bands and directing them to different loudspeaker drive units specifically designed for handling their own range of frequencies. Traditionally this has been done by using passive crossover units built into the loudspeaker boxes; this is the simplest solution, but it is also a bundle of compromises.

Active crossovers are used to a small but rapidly growing extent in domestic hifi, and I argue that their widespread introduction may be the next big step in this field. The Design of Active Crossovers has now been updated and extended for the Second Edition, taking in developments in loudspeaker technology and crossover design. Many more pre-designed filters are included so that crossover development can be faster and more certain, and the result will have a high performance.

Book description. Active crossovers are used by almost every sound reinforcement system and every recording studio monitoring set-up; but the use of active crossovers is rapidly expanding. This new edition, presents all the updates to loudspeaker technology and crossover design. The edition expands on loudspeaker configurations and design issues, sound reinforcement issues, more on lowpass and highpass filters, and may other filters.

This book deals with the design of active crossovers for multi-way loudspeaker systems. It is, to the best of my knowledge, the first book that concentrates wholly on the subject. It is a unique collection of detailed information on crossover design. It will contain a lot of wholly original information that I have worked out over the last twelve months.

The difference between passive and active crossovers. In a traditional passive loudspeaker, it would receive a full range signal from an external amplifier for the crossover to split and send to the right drive unit: ¶In the conventional system, the crossover is actually a filter network that consists of resistors, coils, and capacitors.
