W altz (1979: 117) insists that if there is any "distinctively political theory of international politics, balance of power is it" and in Theory of International Politics he attempts to formulate and clarify the basis for such a theory. He recognizes, of course, that there is no agreed statement of the theory, and that even the meaning of the balance of power is the source of endless disagreement.

The Theory of International Politics. CHAPTER 1. The Theory of International Politics. Therefore, the seeker after the truth is not one who studies the writings of the ancients and, following his natural disposition, puts his trust in them, but rather the one who suspects his faith in them and questions what he gathers from them, the one who submits to argument and demonstration, and not to the sayings of a human being whose nature is fraught with all kinds of imperfection and deficiency.

From Theory of International Politics . . . National politics is the realm of authority, of administration, and of law. International politics is the realm of power, of struggle, and of accommodation. . . . States, like people, are insecure in proportion to the extent of their freedom. If freedom is wanted, insecurity must be accepted. Organizations that establish relations of authority and control may increase security as they decrease freedom. If might does not make right, whether among people or states, then some institution or agency has intervened to lift them out of nature's realm. The more influential the agency, the stronger the desire to control it becomes. In contrast, units in an anarchic order act for their own sakes and not for the sake of preserving an organization and furthering their fortunes within it. Force is used for one's own interest. In the absence of organization, people or states are free to leave one another alone. Even when they do not do so, they are better able, in the absence of the politics of the organization, to concentrate on the politics of the problem and to aim for a minimum agreement that will permit their separate existence rather than a maximum agreement for the sake of maintaining unity. If might decides, then bloody struggles over right can more easily be avoided.

Kenneth Waltz's 1979 Theory of International Politics is credited with bringing about a "scientific revolution" in the study of international relations - bringing the field into a new era of systematic study. The book is also a lesson in reasoning carefully and critically. Good reasoning is exemplified by arguments that move systematically, through carefully organized stages, taking into account opposing stances and ideas as they move towards a logical conclusion. Theory of International Politics might be a textbook example of how to go about structuring an argument in this way to produce a watertight case for a particular point of view. Waltz's book begins by testing and

critiquing earlier theories of international relations, showing their strengths and weaknesses, before moving on to argue for his own stance - what has since become known as "neorealism." His aim was "to construct a theory of international politics that remedies the defects of present theories." And this is precisely what he did; by showing the shortcomings of the prevalent theories of international relations, Waltz was then able to import insights from sociology to create a more comprehensive and realistic theory that took full account of the strengths of old schemas while also remedying their weaknesses - reasoning out a new theory in the process.

Realism and International Politics brings together the collected essays of Kenneth N. Waltz, one of the most important and influential thinkers of international relations in the second half of the twentieth century. His books *Man, the State and War* and *Theory of International Politics* are classics of international relations theory and gave birth to the school of thought known as neo-realism or structural realism, out of which many of the current crop of realist scholars and thinkers has emerged. Waltz frames these seminal pieces in his theoretical development by explaining the context in which they were written and, building on the broader aims of these theories, explains the elusive nature of power balancing in today's international system. It is an essential volume for both students and scholars.

Within the realist school of international relations, a prevailing view holds that the anarchic structure of the international system invariably forces the great powers to seek security at one another's expense, dooming even peaceful nations to an unrelenting struggle for power and dominance. *Rational Theory of International Politics* offers a more nuanced alternative to this view, one that provides answers to the most fundamental and pressing questions of international relations. Why do states sometimes compete and wage war while at other times they cooperate and pursue peace? Does competition reflect pressures generated by the anarchic international system or rather states' own expansionist goals? Are the United States and China on a collision course to war, or is continued coexistence possible? Is peace in the Middle East even feasible? Charles Glaser puts forward a major new theory of international politics that identifies three kinds of variables that influence a state's strategy: the state's motives, specifically whether it is motivated by security concerns or "greed"; material variables, which determine its military capabilities; and information variables, most importantly what the state knows about its adversary's motives. *Rational Theory of International Politics* demonstrates that variation in motives can be key to the choice of strategy; that the international environment sometimes favors cooperation over competition; and that information variables can be as important as material variables in determining the strategy a state should choose.

"Neoclassical realism is a major theoretical approach to the study of foreign policy. Norrin M. Ripsman, Jeffrey W. Taliaferro, and Steven E. Lobell argue that it can explain and predict a far broader range of political phenomena in international politics. Neoclassical realism challenges other approaches, including structural realism, liberalism, and constructivism"--

War and the State exposes the invalid arguments employed in the unproductive debate about Realism among international relations scholars, as well as the common fallacy of sharply distinguishing between conflict among states and conflict within them. As R. Harrison Wagner demonstrates, any understanding of international politics must be part of a more general study of the relationship between political order and organized violence everywhere--as it was in the intellectual tradition from which modern-day Realism was derived. *War and the State* draws on the insights from Wagner's distinguished career to create an elegantly crafted essay accessible to both students and scholars. "Possibly the most important book on international relations theory since Kenneth Waltz's *Theory of International Politics*." ---James Fearon, Stanford University "This is one of the best books on international relations theory I have read in a very long time. It is required reading for any student of modern IR theory. Once again, Wagner has shown himself to be one of the clearest thinkers in the field today." ---Robert Powell, Robson Professor of Political Science, University of California, Berkeley "Painting on a vast canvas, and tackling and integrating topics such as state formation, domestic politics, and international conflict, R. Harrison Wagner's *War and the State* offers many brilliant insights into the nature of international relations and international conflict. *War and the State* compellingly highlights the importance of constructing rigorous and valid theorizing and sets a high standard for all students of international relations. The field has much to gain if scholars follow the trail blazed by Wagner in this book." ---Hein Goemans, University of Rochester R. Harrison Wagner is Professor of Government at the University of Texas.

The book is written for active learners - those keen on cutting their own path through the complex and at times hardly comprehensible world of THEORY in International Relations. To aid this process as much as possible, this book employs the didactical and methodical concept of integrating teaching and self-study. The criteria for structured learning about IR theory will be derived from an extensive discussion of the questions and problems of philosophy of science (Part 1). Theory of IR refers to the scientific study of IR and covers all of the following subtopics: the role and status of theory in the academic discipline of IR; the understanding of IR as a science and what a "scientific" theory is; the different assumptions upon which theory building in IR is based; the different types of theoretical constructions and models of explanations found at the heart of particular theories; and the different approaches taken on how theory and the practice of international relations are linked to each other. The criteria for the structured learning process will be applied in Part 2 of the book during the presentation of five selected theories of International Relations. The concept is based on "learning through example" - that is, the five theories have been chosen because, when applying the criteria developed in Part 1 of the book, each single theory serves

as an example for something deeply important to learn about THEORY of IR more generally.
