All recommendations are based on evidence-based clinical practice guidelines and recent literature. Cases included illustrate treatment for both low and high risk differentiated thyroid cancer, including surgical approaches, radioiodine therapy, and novel chemotherapies and targeted therapies, as well as postoperative follow-up and special issues.

~~Thyroid Cancer | SpringerLink~~  
Types of thyroid cancer. There are 4 main types of thyroid cancer: papillary carcinoma - the most common type, accounting for about 8 in 10 cases; it usually affects people under 40, particularly women. follicular carcinoma - accounts for up to 1 in 10 cases and tends to affect middle-aged adults, particularly women.

~~Thyroid cancer - NHS~~  
Thyroid cancer is cancer that develops from the tissues of the thyroid gland. It is a disease in which cells grow abnormally and have the potential to spread to other parts of the body. Symptoms can include swelling or a lump in the neck. Cancer can also occur in the thyroid after spread from other locations, in which case it is not classified as thyroid cancer. Risk factors include radiation exposure at a young age, having an enlarged thyroid, and family history. The four main types are papilla

~~Thyroid cancer - Wikipedia~~  
Based on recent data, thyroid cancer is the fifth most common cancer in women. This malignancy accounts for 1.3% of cancer diagnosis with 0.5% of cancer-related mortalities each year. Thyroid cancers include undifferentiated cancers with high mortality, such as anaplastic cancers and differentiated cancers with good prognosis such as papillary thyroid carcinoma and follicular cancer.

~~thyroid cancer a case based approach~~  
Thyroid cancer occurs in the cells of the thyroid - a butterfly-shaped gland located at the base of your neck, just below your Adam's apple. Your thyroid produces hormones that regulate your heart rate, blood pressure, body temperature and weight. Thyroid cancer might not cause any symptoms at first.

~~Thyroid cancer - Symptoms and causes - Mayo Clinic~~  
In the US, a retrospective population based evaluation of patients with thyroid cancer found that the incidence increased from 3.6 per 100 000 in 1973 to 8.7 per 100 000 in 2002, a 2.4-fold increase; almost all the increase was attributable to papillary thyroid cancer (PTC) histology. 20 In this analysis, 49% of the increase between 1988 and 2002 consisted of microcarcinomas (?1 cm) and 87% were small tumors (?2 cm).

~~Thyroid Cancer A Case Based Approach~~  
Author summary A few methods have been developed to leverage omics data (e.g., iCluster) to solve cancer classification. However, these omics data always focus on the coding regions (2% of the human genome). Cancer classification methods based on the high-dimensional raw data across the whole genome are rare. Our approach addressed crucial and fundamental limitations in existing approaches.
