This book uniquely combines CBT with the Department of Health stepped care model to provide the first comprehensive case study-approach textbook. A step-by-step guide to using CBT, the book is structured around case studies of clients who present with the most commonly encountered conditions; from mild to more complex, enduring symptoms and diagnosis. This distinctive practical format is ideal in showing how to put the principles of CBT and stepped care into effect. As well as echoing postgraduate level training, it provides an insight into the experiences the trainee will encounter in real-world practice. Each chapter addresses a specific client condition and covers initial referral, presentation and assessment, case formulation, treatment interventions, evaluation of CBT strategies and discharge planning. Specific presenting problems covered include: - First onset and chronic Depression - Social Phobia - Obsessive-Compulsive Disorder - Generalised Anxiety Disorder (GAD) - Chronic Bulimia Nervosa and Anorexia nervosa - Alcohol Addiction - Personality Disorder The book also includes practical learning exercises for the reader and clinical hints, as well as extensive reference to further CBT research, resources and reading. This timely text will be invaluable for trainees on Improving Access to Psychological Therapies (IAPT) programmes, and anyone studying on postgraduate CBT courses.

Beginning with 1937, the April issue of each vol. is the Fleet reference annual.

This comprehensive, authoritative text provides a state-of-the-art review of current knowledge and best practices for helping adults with psychiatric disabilities move forward in their recovery process. The authors draw on extensive research and clinical expertise to accessibly describe the "whats," "whys," and "how-tos" of psychiatric rehabilitation. Coverage includes tools and strategies for assessing clients' needs and strengths, integrating medical and psychosocial interventions, and implementing supportive services in such areas as housing, employment, social networks, education, and physical health. Detailed case examples in every chapter illustrate both the real-world challenges of severe mental illness and the nuts and bolts of effective interventions.

With contributions by numerous experts

Explores sex differences in human neuroanatomy and neurophysiology Offers a pathway toward a gender-specific treatment of neurologic and psychiatric disorders Provides an overview of the genetics of sex hormones, human brain structure, and function, as well as the epigenetics, environment and social context

PSYCHOLOGY: FOUNDATIONS AND FRONTIERS offers a fresh and updated approach that combines the appealing content, visuals, and effective features of Douglas Bernstein's two previous introductory psychology textbooks. Focusing on active learning, the text presents important findings from established and current research, emphasizes the many ways psychological theory and research results are being applied to benefit human welfare, and integrates extensive pedagogy. The integrated pedagogical system helps students master the material by supporting the elements of the PQ4R (Preview, Question, Read, Recite, Review, and Reflect) study system. Try This activities illustrate psychological principles or phenomena by encouraging students to learn by doing. Other features designed to promote efficient learning include Linkages diagrams and sections that show how topics in psychology are interrelated, Thinking Critically sections that apply a five-question approach to various topics, and Focus on Research sections that help students think objectively about research questions and results. To offer flexibility in a single-term course, the book includes eighteen chapters that may be assigned in whatever order meets instructors' needs.
