Durkheim, Sorokin, and several more recent scholars, such as the neo-Marxians, have contributed to the foundation of a general theory of punishment. two basic properties of collectivities are of greatest utility in explaining variations in the form and intensity of penal sanctions: All else equal, social groups become more punitive and administer sanctions with greater formality as the relational distance between members widens and as the group undergoes stressful change.

The aim in this paper is to move towards a general theory by producing a more comprehensive model, not by enumerating all phenomena and unifying all possible theories. Finally, while sensitivity to theory and awareness of its diverse forms and purposes is a normal part of the training of social scientists, the integration of constructs belonging to different theories is an under-explored problem of method [88].

Any theory of reduction that goes only so far as carried in Parts I and II (,) does only half the job. Prima facie at least, there are cases of would-be reduction which seem torn between two conflicting intuitions. On the one side there is a strong intuition that reduction is involved, and a strongly retentive reduction at that.
