A collection of 60 case studies, each presented as a common clinical problem, with some intriguing titles, including: 'He's just not himself anymore' and 'My leg gave way'. Each case history takes form of a narrative interrupted by questions with the relevant answers alongside. With its problem-based approach, it helps students appreciate the correct path to diagnosis of the pathological signs and symptoms. An excellent revision companion, each case has a revision box of key topics linked in to the main textbook so the student can refer to it for more details. Although the case studies correspond to chapters in the main textbook (three cases per chapter), the reader approaches each case as they would present in life, symptom-first. Illustrated throughout with full color gross and histopathological photographs as well as clinical photographs, radiographs and line diagrams, this book has an instant visual appeal and presents the subject in a refreshing and innovative way.

Covering anatomical, clinical, pathological and laboratory aspects of surgical histopathology specimens, *Histopathology Specimens: Clinical, Pathological and Laboratory Aspects, Second Edition* relates specimen dissection and its clinical context to relevant histopathology reports, and therefore a more comprehensive patient prognosis and management is possible. *Histopathology Specimens: Clinical, Pathological and Laboratory Aspects, Second Edition* explains pathological and clinical terminology, including a glossary of clinical request form abbreviations. A standardised step-wise approach to specimen handling is illustrated with simple line diagrams and highlights essentials of the histopathology report, relating them to appropriate specimen dissection.
