View/Download Product Documentation - AutoSys

The n_retrys job definition parameter instructs AutoSys to restart the job N number of times upon failure. Job_a's definition tells AutoSys to restart the job up to 2 times if it initially runs to FAILURE. If after 2 retries the job still does not run to SUCCESS, the job will be set to FAILURE (FA) status and an alarm of type MAX_RETRYS will be generated to alert you that the n_retrys have been exceeded for this job.
