What links the frustrations of daily life, like VCR clocks and voicemail systems, to airplane crashes and a staggering “hidden epidemic” of medical error? Kim Vicente is a professor of human factors engineering at the University of Toronto and a consultant to NASA, Microsoft, Nortel Networks and many other organizations; he might also be described as a “technological anthropologist.” He spends his time in emergency rooms, airplane cockpits and nuclear power station control rooms--as well as in kitchens, garages and bathrooms--observing how people interact with technology. Kim Vicente sets out the disturbing pattern he’s observed: from daily life to life-or-death situations, people are using technology that doesn’t take the human factor into account. Technologies as diverse as stove tops, hospital work schedules and airline cockpit controls lead to ‘human error’ because they neglect what people are like physically, psychologically, and in more complex ways. The results range from inconvenience to tragic loss of life. Our civilization is at a crossroads: we have to change our relationship with technology to bring an end to technology-induced death and destruction, and start to improve the lives of everyone on the planet. The Human Factor sets out the ways we can regain control of our lives.

Intelligent Image Processing describes the EyeTap technology that allows non-invasive tapping into the human eye through devices built into eyeglass frames. This isn't merely about a computer screen inside eyeglasses, but rather the ability to have a shared telepathic experience among viewers. Written by the developer of the EyeTap principle, this work explores the practical application and far-reaching implications this new technology has for human telecommunications.

dedicated to basic TEE while the second provides focused coverage of bedside ultrasound. The book also includes chapters on extra-cardiac TEE and ultrasound of the brain—unconventional areas that will become more important in the future as clinicians evaluate not only the etiology of hemodynamic instability but also the impact on multiple organs and systems such as the kidney, liver, splanchnic perfusion, and brain. This text is an invaluable resource to those preparing for the National Board of Echocardiography's Examination of Special Competence in Basic Perioperative Transesophageal Echocardiography (PTEeXAM) and its equivalents outside the USA and Canada. In addition, it prepares physicians for the American College of Chest Physician's critical care ultrasound certification. The contents follow the syllabus of the TEE basic echo exam to ensure complete coverage of a trainee's requirements. It also includes sample questions and two helpful mock exams. Written by a multidisciplinary team of experts in TEE, the book is a must-have for those in training and in practice.
