Disease study in 7715  
subjects (40% men, 60%  
women) aged 55 years  
and over. The presence  
of PAD and IC was  
determined by  
measuring the ankle-  
arm systolic blood  
pressure index (AAI)  
and by means of the  
World Health  
Organization / Rose  
questionnaire,  
respectively.
