As summer days start to heat up and outdoor activities ramp up, some ticks are in their most dangerous life stage this summer —and they are prone to hide undetected on clothes and pets.

Ticks in the DC Area: How to Be Safe This Summer

North Carolina is listed in a recent study as one of the most dangerous states to drive in during the Fourth of July. Onslow County law enforcement reminds drivers to be cautious.

A thrilling tale of encounters with nature's masters of biochemistry "A fitting tribute to one of nature's most sinister creations of all." —Carl Zimmer, author of *Parasite Rex* In *Venomous*, the molecular biologist Christie Wilcox investigates venoms and the animals that use them, revealing how they work, what they do to the human body, and how they can revolutionize biochemistry and medicine today. Wilcox takes us from the coast of Indonesia to the rain forests of Peru in search of the secrets of these mysterious animals. We encounter jellyfish that release microscopic venom-packed darts known to kill humans in just two minutes, a two-inch caterpillar with toxic bristles that trigger hemorrhaging throughout the body, and a stunning blue-ringed octopus with saliva capable of inducing total paralysis. How could an animal as simple as a jellyfish evolve such an intricate, deadly poison? And how can a snake possess enzymes that tear through tissue yet leave its own body unscathed? Wilcox meets the fearless scientists who often risk their lives studying these lethal beasts to find out, and puts her life on the line to examine these species up close. Drawing on her own research on venom chemistry and evolution, she also shows how venom is helping us untangle the complex mechanisms of some of our most devastating diseases. *Venomous* reveals that the animals we fear the most actually hold the keys to a deeper understanding of evolution, adaptation, and immunity. Thrilling and surprising at every turn, *Venomous* will change the way you think about our natural world.

A thrilling tale of encounters with nature's masters of biochemistry From the coasts of Indonesia to the rainforests of Peru, venomous animals are everywhere—and often lurking out of sight. Humans have feared them for centuries, long considering them the assassins and pariahs of the natural world. Now, in *Venomous*, the biologist Christie Wilcox investigates and illuminates the animals of our nightmares, arguing that they hold the keys to a deeper understanding of evolution, adaptation, and immunity. She reveals just how venoms function and what they do to the human body. With Wilcox as our guide, we encounter a jellyfish with tentacles covered in stinging cells that can kill humans in minutes; a two-inch caterpillar with toxic bristles that trigger hemorrhaging; and a stunning blue-ringed octopus capable of inducing total paralysis. How do these animals go about their deadly work? How did they develop such intricate, potent toxins? Wilcox takes us around the world and down to the cellular level to find out. Throughout her journey, Wilcox meets the intrepid scientists who risk their lives studying these lethal beasts, as well as "self-immunizers" who deliberately expose themselves to snakebites. Along the way, she puts her own life on the line, narrowly avoiding being envenomated herself. Drawing on her own research, Wilcox explains how venom scientists are untangling the mechanisms of some of our most devastating diseases, and reports on pharmacologists who are already exploiting venoms to produce lifesaving drugs. We discover that venomous creatures are in fact keystone species that play crucial roles in their ecosystems and ours—and for this alone, they ought to be protected and appreciated. Thrilling and surprising at every turn, *Venomous* will change everything you thought you knew about the planet's most dangerous animals.

Did you know that the king cobra snake has enough venom in each bite to kill an elephant? Learn all about the world's most dangerous animals—including tiger sharks, black widow spiders, and polar bears—in this fact-filled Level 3 reader.

An explosive and historic book of true crime and an emotionally powerful and revelatory memoir of a man whose ten-year search for his biological father leads to a chilling discovery: His father is one of the most notorious-and still at large-serial killers.

"The story of venom from ancient origins to modern medicinal use"--

Join award-winning photographers Joe and Mary Ann McDonald on a journey of discovery in search of the World's Deadliest Creatures. Whether it's venomous cobras, poisonous jellyfish, hungry tigers, aggressive hippos, the diseases carried by mosquitoes or the traffic accident waiting to happen that is the moose, there are many ways in which then natural world can pose a threat. Stunning images coupled with engaging text covering more than 100 deadly species make this book a must-read for anyone with an interest in the dark side of wildlife! -- Joe & Mary Ann McDonald

Offers information on many dangerous animals and illustrates what can go wrong when humans interact with them.

Briefly introduces animals known for their powerful or poisonous attacks, providing information on their physical dimensions, speed, and habitat, and how they attack or kill other creatures.

Introduces some of the most dangerous animals on Earth, describing the physical characteristics and behavior that makes them deadly, including such creatures as saltwater crocodiles, poison dart frogs, box jellyfish, and scorpions.

These deadly animals should be avoided at all times. But how do children get to learn about them and appreciate them if they are not allowed to be near them? Well, here's a book that provides the answer! This educational book will allow for a thorough study of these dangerous animals through real-life pictures and select texts. Kids would love the adventure this book presents so buy a copy today!
