When you switch to a manual WARN 4WD Hub, you have the ability to disconnect front wheels from the front drivetrain, increasing fuel economy, and decreasing drivetrain wear. Another benefit of WARN 4WD locking hubs is durability.

~~The benefits of manual locking hubs | WARN Industries~~

Locking hubs, also known as free wheeling hubs are fitted to some (mainly older) four-wheel drive vehicles, allowing the front wheels to rotate freely when disconnected (unlocked) from the front axle. This is done to reduce the mechanical resistance of the front-portion of the drivetrain when four-wheel drive is not in use.

~~Locking hubs - Wikipedia~~

Older 4WD vehicles had manual locking hubs and were referred to as "part-time" 4x4 because the half axles moved freely of each other like a 2WD car. On these models you had to exit your vehicle to turn a dial on the hub of each front wheel from "free" to "lock" and then get back in and set your transmission into the "neutral" position before engaging 4x4.

~~How Do Locking Hubs Work? | It Still Runs~~

If the hubs are locked and 4x4 has not been selected there will also be no drive to the front wheels. To be in 4 wheel drive they need to be locked and the 4x4 selected, this will transfer 25% drive to each of the 4 wheels. Manual And Automatic Hubs.

~~4x4 Hubs & the Myth about manual Hubs exposed:~~

That's why the manual locking hubs were invented: When set to Free these hubs isolate the wheel from the combination of front axle, differential and front propshaft. All of those stay stationary when the vehicle is driven in 2WD, so no wasted energy.

~~Why Toyota is wrong about the LC70's manual/automatic hubs...~~

Hubs are either locked manually or automatically lock when you engage the four-wheel drive, depending on the type of four-wheel drive system in the vehicle. If your locking hubs are bad, it will affect the entire four-wheel drive system. There are several signs that your vehicle will exhibit if the hubs have broken or gone bad.

~~Signs That Locking Hubs Are Bad | It Still Runs~~

Locking hub were invented to engage/disengage the front wheels from the front axle shafts. Idea was to keep parts that were not needed in 2WD mode from rotating in order to reduce mechanical drag and thus save gas. Good idea but the savings are extremely minimal. A proposed additional benefit of locking hubs is less wear and tear of front axle parts.

~~locking hubs - to lock or not to lock, how to use manual...~~

They are manual rather than auto locking hubs, because manual are much more reliable, and you can engage them while stopped. The front and rear wheels have to be spinning the same speed to engage auto locking hubs, so if you are stuck in the snow, the front wheels won't be spinning and can't engage.

~~EL15: Why do Ford trucks have manual hubs, but nobody else...~~

I had an 80 Bronco with manual hubs. I had a 92 Explorer with automatic hubs. I have an 08 Expedition, auto hubs and an 06 Escape hybrid AWD I will never go back to manual hubs. The Explorer was my baby, kept it for 17 years before up-sizing to the Expedition. In this weekend's four corners weather I wish I had the little Explorer back.

~~Manual Locking Hubs - Maintenance/Repairs - Car Talk Community~~

Manual locking hubs feature a relatively simple mechanism compared to the automatic type. This means there are fewer parts that can go bad inside the assembly. In addition, they are considered as heavy-duty locking hubs due to their durability. On the flip side, manual locking hubs can't match the convenience brought by automatic locking hubs.
