Rain Wilson isn't ever going to love again. It's a promise she made the day her boyfriend died in a water park accident, one she still blames herself for. Now she's a senior lifeguard in a new town with a new pool and she's just going to keep her head down and everyone safe. Until a mysterious guy follows her into the waves at the pre-season bonfire and kisses her senseless. It's just one mistake, and Rain is determined to put it behind her, until the dark haired, blue eyed hottie turns out to be her new co-supervisor Knight Mcallister. Knight is hot, tatted, and carrying baggage of his own. He's not happy about having Rain for a co-supervisor, and he's even less happy about his attraction to her. But between lifeguard drama, hot underwater kisses, and a growing attraction between them that can't be stopped, Knight and Rain are being pulled deeper into their pasts, and realizing that sometimes too much broken can make a relationship impossible. Then again sometimes it's the broken parts of us that fit together best.

In 1932, world-renowned physicist Wolfgang Pauli had already done the work that would win him the 1945 Nobel Prize. He was also suffering after a series of troubling personal events. He was drinking heavily, quarrelling frequently, and experiencing powerful, disturbing dreams. Pauli turned to C. G. Jung for help, forging an extraordinary intellectual conjunction not just between a physicist and a psychologist but between physics and psychology. As their acquaintance developed, Jung and Pauli discussed the nature of dreams and their relation to reality, finding surprising common ground between depth psychology and quantum physics and profoundly influencing each other's work. This portrait of an incredible friendship will fascinate readers interested in psychology, science, creativity, and genius.

Fermented Beverage Production, Second Edition is an essential resource for any company producing or selling fermented alcoholic beverages. In addition it would be of

value to anyone who needs a contemporary introduction to the science and technology of alcoholic beverages. This authoritative volume provides an up-to-date, practical overview of fermented beverage production, focusing on concepts and processes pertinent to all fermented alcoholic beverages, as well as those specific to a variety of individual beverages. The second edition features three new chapters on sparkling wines, rums, and Latin American beverages such as tequila, as well as thorough updating of information on new technologies and current scientific references.

Business process management is the basis for all initiatives like SCM, CRM, ERP, or business intelligence. New component and internet-based software architectures and web services require a solid process management to deliver the expected business success. However, many organizations still struggle to find the right approach to business process management. IDS Scheer delivers with ARIS the framework to meet this challenge successfully. IDS Scheer has successfully applied its ARIS business process management approach at thousands of organizations worldwide such as Intel, Siemens, or the US Navy. This book presents international case studies in various manufacturing and service industries as well as the public sector. It shows how to achieve business process excellence in practice.

This handbook is the only up-to-date, A to Z compilation of commercial and research zeolites. The volume presents complete patent-researched reference information on structural data, synthesis parameters, and characteristic properties. For each known zeolite there is an entry on all organics which crystallize a given structure, physical data,

and applications. Data is presented in tabular or graphical form with minimal text, and a cross-referenced literature review is provided.

Hypogean (cave, artesian) fishes have fascinated researchers even before they were described in the scientific literature in 1842. Since then, a number of scientists have used them to justify their own evolutionary ideas, from neo-Lamarckism to neo-Darwinism, from neutral evolution to selectionist approaches. Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed: there are those with features expected from living in total darkness (complete blindness and depigmentation) and poor in nutrients (extremely low metabolic rates); others differ very little, if any, from their epigean (surface) ancestors in their morphology and physiology (but not so in their behavior). Some of them even live in nutrient-rich environments. Actually, one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms (blindness, depigmentation) than with troglomorphic ones. The study of these apparently `unadapted' fishes is providing new insights into our understanding of the evolution of phenotypic characters, founding effect, behavioral, and physiological adaptations. The 86 species of troglomorphic fishes described so far belong to 18 different families, many of which would hardly fit the notion that they were 'preadapted' to conquer the underground environment. Further, many troglomorphic `species' show very little genotypic differentiation when compared with their putative ancestors, indicating that massive phenotype changes can be achieved via little genetic reorganization, a reorganization that mostly affects regulatory genes. These and many other topics are discussed in this

volume containing 29 papers, written by 41 authors from 9 countries. Hopefully, this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood: convergent evolution.

This book is about Sulph(on)ation Technology in its technical entirety, aiming at superiority in final product quality, raw material utilisation, sustained plant reliability and safety, minimisation of liquid effluent and gaseous emissions; it is about the total quality of the operation. It will be of value to engineers and chemists who are, or will be, involved in the practical daily operation of sulphonation plants or R&D activities. The book can also be used as a tool for the teacher in preparing fmal year projects in a chemical engineering curriculum. The book covers sulphonation of alkylbenzenes, primary alcohols, alcohol ethers, alpha-olefIns and fatty acid methyl esters, with a strong emphasis on the sulphur-based S~/air sulphonation technology. The first part deals with raw material specifications, hazards, storage, handling and physical properties. In the following section the process chemistry is discussed, indicating main chemical reactions, undesired parallel and consecutive reactions, exothermal heat effects and all other process chemistry data that are relevant for process selection and equipment design. The section about the actual process equipment from the various plant equipment suppliers (Ballestra, Chemithon, Mazzoni, Meccaniche Modeme and Lion Corp.) takes into account the chemical reaction engineering aspects derived from the sulphonation technology processing chemistry. Product quality, product storage and handling, product safety and physical properties are the contents of the next section. The effluent handling and exhaust gas treatment of the SOiair sulphonation technology are further discussed in detail.
