MFC was introduced in 1992 and developed to simplify the process of windows application development. The MFC library wraps portions of the Windows API in C++ classes meaning that direct Windows API calls are rarely needed. Programs create objects from Microsoft Foundation Class classes and call member functions belonging to those objects. The main advantage of this approach is ease and speed of development application by providing per-written code.

MFC was introduced in 1992 with Microsoft's C/C++ 7.0 compiler for use with 16-bit versions of Windows as an extremely thin object-oriented C++ wrapper for the Windows API. C++ was just beginning to replace C for development of commercial application software at the time. In an MFC program, direct Windows API calls are rarely needed. Instead, programs create objects from Microsoft Foundation Class classes and call member functions belonging to those objects.

Microsoft Foundation Class Library -
Wikipedia

In essence, MFC is a SDK interface, a library consisting in a set of classes that act as wrappers around portions of the Windows API, so that C++

programmers may program Windows using some concepts of the object-oriented programming (OOP) paradigm and the C++ language (the Win32 API is based on C, as seen in C and Win32 API Section of the book).

Windows Programming/Microsoft Foundation Classes ...

To create a program, also called an application, you derive a class from the MFC's CWinApp. CWinApp stands for Class for a Windows Application.

Let us look into a simple example by creating a new Win32 project. Step 1

- Open the Visual studio and click on the File New Project menu option.
