At the turn of the last century C.G. Jung began his career as a psychiatrist. During the next decade, three men whose names are famous in the annals of medical psychology influenced his professional development: Pierre Janet, under whom he studied at the Sappetriere Hospital in Paris; Eugen Bleuler, his chief at the Burgholzli Mental Hospital in Zurich; and Sigmund Frued, whom Jung met in 1907. It is Bleuler, and to a lesser extent Janet, whose influence is to be found in the descriptive experimental psychiatry composing Volume I of the Collected Works. These papers appeared between 1902 and 19051 most of them are now being published in English for the first time. The volume opens with Jung's dissertation for the medical degree: 'On the Psychology and Pathology of So-Called Occult Phenomena', a study that foreshadows much of his later work, and as such is indispensable to all serious students of his work. It is the detailed analysis of the case of an hysterical adolescent girl who professed to be a medium. The volume also includes papers on cryptomnesia, hysterical parapraes in reading, manic mood disorder, simulated insanity, and other subjects.

Pierre Janet, under whom he studied at the Salpêtrière Hospital in Paris; Eugen Bleuler, his chief at the Burgholzli Hospital in Zurich; and Sigmund Freud, with whom Jung began corresponding in 1906. It is Bleuler, and to a lesser extent Janet, whose influence bears on the studies in descriptive and experimental psychiatry composing Volume 1 of the Collected Works. This first volume of Jung's Collected Works contains papers that appeared between 1902 and 1905. It opens with Jung's dissertation for the medical degree: "On the Psychology and Pathology of So-called Occult Phenomena," a detailed analysis of the case of an hysterical adolescent girl who professed to be a medium. studying normal and abnormal psychology. The studies have remained a significant phase in the development of Jung's conceptions and an important contribution to diagnostic psychology and psychiatry. Between 1904 and 1907 he published nine studies on the tests. These studies, together with two lectures on the association method given in 1909 at Clark University and three articles on psychophysical researches from American and English journals in 1907-1908, compose this volume. Jung's association studies showed the definite influence of Bleuler and also of Freud, with whom he worked closely for several years. With this volume, the Collected Works are complete except for the Miscellany, Bibliography and Index volumes.

This volume has become known as perhaps the best introduction to Jung's work. In these famous essays. "The Relations between the Ego and the Unconscious" and "On the Psychology of the Unconscious," he presented the essential core of his system. Historically, they mark the end of Jung's intimate association with Freud and sum up his attempt to integrate the psychological schools of Freud and Adler into a comprehensive framework. This is the first paperback publication of this key work in its revised and augmented second edition of 1966. The earliest versions of the Two Essays, "New Paths in Psychology" (1912) and "The Structure of the Unconscious" (1916),

discovered among Jung's posthumous papers, are published in an appendix, to show the development of Jung's thought in later versions. As an aid to study, the index has been comprehensively expanded.

This comparative study of the basic concepts of Freud and Jung is designed to give a comprehensive understanding of Jung's work. The author traces the development of Jung from his initial fascination with Freud's ideas to his gradual liberation from these powerful concepts and the final breakthrough into his own unique theories of man and the cosmos. Jung's fundamental viewandmdash;that the psyche is a totality of conscious and unconscious elements that seeks to realize itselfandmdash;stands in sharp contrast to Freud's early view of the psyche as primarily the effect of prior causes. Hence Freud tends to stress the pathological, whereas Jung looks to the creative and self-transcending aspects of human nature. The final section of the book describes the development of Jung's ideas after the death of Freud, particularly his concept of the archetypes.

The concept of 'Archetypes' and the hypothesis of 'A Collective Unconscious' are two of Jung's better known and most exciting ideas. In this volume - taken from the Collected Works and appearing in paperback for the first time - Jung describes and elaborates the two concepts. Three essays

establish the theoretical basis which are then followed by essays on specific archetypes. The relation of these to the process of individuation is examined in the last section. The Archetypes and the Collective Unconscious is one of Jung's central works. There are many illustrations in full colour.

An Introduction to the Collected Works of C. G. Jung: Psyche as Spirit offers a concise and engaging overview of Jung's work and contributions to the field of psychology. Mayes brings into focus the major concepts and themes explored in Jung's Collected Works, including the ego-Self Axis, archetypes, personality types, and the Collective Unconscious, presenting a thorough introduction and a valuable resource for both Jungian students as well as Jungian scholars.
